Mid-Cumberland Public Transit – Human Services Transportation Plan

Prepared for:

Prepared by:

September 2016
This document is available in accessible formats when requested ten (10) calendar days in advance.

This document was prepared and published by the Nashville Area Metropolitan Planning Organization and the Clarksville Urbanized Area Metropolitan Planning Organization. The document was also prepared in cooperation with the following public entities: the Federal Transit Administration (FTA), the Federal Highway Administration (FHWA), and the Tennessee Department of Transportation (TDOT). This financial assistance notwithstanding, the contents of this document do not necessarily reflect the official view or policies of the funding agencies.

It is the policy of the following entities to ensure compliance with Title VI and the Americans with Disabilities Act to the end that no person shall be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance from the U.S. Department of Transportation on the basis of age, sex, race, color, national origin, or disability. All inquiries related to Title VI or the American Disabilities Act, please contact the Civil Rights Office at the Tennessee Department of Transportation at 651-741-3681 or toll free at 1-888-370-3647.

Executive Summary
Plan Purpose

Background

The Moving Ahead for Progress in the 21st Century Act (MAP-21) requires that projects chosen for funding through the Enhanced Mobility of Seniors and Individuals with Disabilities Program (Section 5310) be “included in a locally developed, Coordinated Public Transit – Human Services Transportation Plan” and that the plan be “developed and approved through a process that included participation by seniors, individuals with disabilities, representatives of public, private, and nonprofit transportation and human services providers and other members of the public.” This plan aims to meet the federal requirements, as well as identify opportunities to achieve efficiencies in service delivery throughout the Mid-Cumberland area.

The Coordinated Public Transit – Human Services Transportation Plan for the Nashville Area and Clarksville Urbanized Area Metropolitan Planning Organizations (MPOs) is meant to:

- Assess the available transportation services;
- Identify transportation needs of older adults, persons with disabilities and persons with low income;
- Provider strategies for meeting those identified needs; and
- Prioritize transportation strategies and activities for funding and implementation.

Study Area

The study area is made up of the Mid-Cumberland region and spans 15 counties in two states: 14 counties in Tennessee and one county in Kentucky. The study area is broken into two distinct areas, Nashville and Clarksville. The Nashville area includes the counties of Cheatham, Davidson, Dickson, Houston, Humphreys, Maury, Robertson, Rutherford, Sumner, Trousdale, Williamson, and Wilson in Tennessee. The Nashville Area MPO covers seven counties (Davidson, Maury, Robertson, Rutherford, Sumner, Williamson, and Wilson). The Nashville area is anchored by the City of Nashville, but also includes the cities of Murfreesboro and Franklin. A majority of the Nashville area includes smaller suburban communities, townships, and rural communities.

The Clarksville area includes the counties of Montgomery and Stewart in Tennessee and Christian County in Kentucky. The Clarksville Urbanized Area MPO covers two counties (Montgomery and Christian). The Clarksville area includes the City of Clarksville in Tennessee, and the cities of Hopkinsville and Fort Campbell in Kentucky. A majority of the Clarksville area consists of small towns and rural communities.

The Mid-Cumberland Human Resources Agency (MCHRA) covers all of the Tennessee counties within the study area, except for Maury County. MCHRA provides trips throughout a majority of the study area, and a most of those trips connect the rural and exurban areas with the larger cities.

Transportation Service Providers

There are a multitude of service providers in the study area. The main public transportation providers in the Nashville area are the Nashville Metropolitan Transit Authority (MTA), Middle Tennessee Regional Transportation Authority (RTA), MCHRA, Rover Transit in the City of Murfreesboro, Franklin Transit and VanStar Vanpool operated by TMA Group, and South Central Tennessee Development District that operates services in Maury County with connections to Nashville and Murfreesboro. The main public transportation providers in the Clarksville area are the Clarksville Transit System (CTS), Middle Tennessee RTA, MCHRA, and Montgomery County Veterans Transportation. Figure i shows the many public transportation (fixed-route and demand response), non-emergency medical transportation (NEMT), agency transportation providers, inter-city bus providers, and private demand services providers in the area.
Figure i. Services Available within the Study Area

Caption: N.E.M.T., listed alongside other service types, stands for non-emergency medical transportation. Source: Advisory Committee, National Provider Identifier Database, and TranSystems.

Transportation Needs

A majority of the transportation disadvantaged populations are located in and around municipalities. In the Nashville area, these populations are more concentrated in and around Nashville, Murfreesboro, Franklin, Columbia, and Lebanon. In the Clarksville area, these populations are more concentrated in and around Clarksville and Hopkinsville. Figure ii illustrates where the transportation disadvantaged populations are located. The geographical layout of the study area and the challenges faced by transportation disadvantaged populations create unique service gaps and needs.

Strategies for Meeting Identified Needs

The following are potential strategies to address the service gaps and needs that have been identified.

Information and Awareness

► Explore the development of a local coordination policy body/council.
► Explore the development of a one-stop transportation traveler call center to coordinate services.
► Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.
► Host how-to-ride workshops.
► Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.

Geographical

► Evaluate current accessibility to transit stops and identify ways to improve first-/last-mile connections.
► Review service routes and expand service to key activity centers currently underserved or not served by transit, paratransit, or service agencies.
► Coordinate service delivery among lower density areas.
► Evaluate existing land uses near transit centers and identify ways to effectively coordinate land use with transit services, such as transit oriented development.
► Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed.

Time-Based

► Expand or shift hours to include weekend service.
► Expand transit, paratransit, and service agency hours to include evening service.

Client-Based

► Evaluate existing services for persons with disabilities and identify areas of expansion.
► Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops.
► Evaluate existing services for youth and children and identify areas of expansion.
► Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians.
► Evaluate existing services for veterans and identify areas of expansion.
► Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnerships, and payment adjustments.
► Evaluate current security on transit services and identify ways to increase security on vehicles.

**Service Quality**

► Evaluate current service frequencies and identify ways to increase frequency of services.
► Evaluate existing transportation alternatives and identify ways to expand transportation options.
► Evaluate existing paratransit and demand responsive transportation services and identify areas to expand services.
► Evaluate riders’ experiences and identify ways to better meet riders’ needs.
► Identify funding to purchase transportation vehicles for increased service.

**Prioritization of Strategies and Activities**
Following the prioritization of gaps and needs within the study area, proposed strategies and activities were identified. Because each state has varying demographics, geography, and funding methodologies, it follows that each state has a different prioritized list of service gaps and unmet needs. To address the gaps and needs, stakeholders at public meetings in each state identified various strategies and activities. The strategies and activities that are best suited to addressing each state’s gaps and needs were identified by stakeholder input and professional expertise. Figures iv and v show the short-term and long-term strategies and activities, respectively, for each state.

Introduction
Plan Purpose

The Coordinated Public Transit – Human Services Transportation Plan (CPT-HSTP) for the Mid-Cumberland region is prepared in compliance with the federal transit law, Moving Ahead for Progress in the 21st Century (MAP-21).

MAP-21 states that projects selected for funding through the Enhanced Mobility of Seniors and Individuals with Disabilities Program (Section 5310) be “includes in a locally developed, Coordinated Public Transit – Human Services Transportation Plan” and that the plan be “developed and approved through a process that included participation by seniors, individuals with disabilities, representatives of public, private, and nonprofit transportation and human services providers and other members of the public.”

The purpose of the CPT-HSTP is to create a better transit system for transportation disadvantaged populations: older adults, persons with disabilities, and persons of low income. This includes evaluating the existing paratransit, demand response transportation, human service agency, nonprofit and private for-profit providers. Similarly, the current service gaps and unmet needs faced by transportation disadvantaged populations are assessed. Using the information gathered, a catalog of strategies is created to address those gaps and needs. Lastly, the plan prioritizes strategies and activities for funding and implementation.

Study Area

The study area includes 15 counties in two states; 14 counties in Tennessee and one county in Kentucky (see Figure 1). To determine the boundaries of the study area, the Advisory Committee looked at agencies that offer services in or near the Nashville and Clarksville areas and evaluated travel patterns of the various service agencies. The committee decided on the 15-county region because the residents of those counties rely on trips to and from Nashville, Clarksville, and the surrounding area for medical, job-related, and other travel needs.

Included within the study area are multiple public transportation providers. Some of the agencies covered by the study area include: Nashville MTA, Middle Tennessee RTA, MCHRA, Rover Transit in the City of Murfreesboro, Franklin Transit and VanStar Vanpool operated by TMA Group, and South Central Tennessee Development District within the Nashville area, and CTS, Middle Tennessee RTA, MCHRA, and Montgomery County Veterans Transportation within the Clarksville area.

Plan Development Process

The development of the plan began by creating an Advisory Committee to review project material from a local perspective. Throughout the planning process, the Advisory Committee provided insight that helped guide the plan. The development of the plan was broken into four main steps: setting parameters and gathering preliminary data, identifying unmet needs/service gaps and potential strategies, prioritizing strategies and activities, and producing a plan.

The Advisory Committee helped guide the project and identified local agencies to participate in the planning process. The committee also reviewed data from the previous plan and offered new information that led to the development of a list of service providers and challenges to providing coordinated service delivery. Preliminary demographic data was gathered on the older adult, persons with disabilities, and persons with low income populations that live within the study area. These initial efforts helped shape an image of where needs exist, how existing services address those needs, and what are the goals of the CPT-HSTP.

To identify unmet needs, service gaps, and potential strategies, the Advisory Committee met and discussed the challenges faced by communities throughout the study area. The committee helped decide where to hold various stakeholder and general public meetings. It was imperative that efforts be taken to reach out to the public in a manner that made meetings easy to attend. The Advisory Committee, stakeholders, and the general public not only listed and categorized the service gaps and unmet needs, but also identified existing barriers to
addressing those challenges and developed potential strategies to overcoming those service gaps and unmet needs. The various meetings helped refine the list to better suit the communities within the study area.

The final step was to create a draft plan that integrated the outcomes of the previous steps. As a whole, the plan meets all federal requirements and provides a funding strategy to ensure that the service needs of transportation disadvantaged populations are met. The Advisory Committee presented the draft plan to the public. The public input assisted the Advisory Committee in producing a final product.

Public and Stakeholder Participation

It is required by federal law that a CPT-HSTP be developed locally in a manner that includes the participation of older adults, persons with disabilities, representatives of public, private, and nonprofit transportation and human services providers, as well as members of the public. In order to meet that requirement, an Advisory Committee was formed as an integral part to the development of the plan. The Advisory Committee functioned as an oversight board to guide the progression of the plan development. The committee included representatives from the Tennessee Department of Transportation (TDOT), Nashville Area MPO, Clarksville Urbanized Area MPO, Nashville MTA, CTS, City of Murfreesboro Rover Transit, Mid-Cumberland HRA, TMA Group, Tennessee Council on Aging & Disability, Metropolitan Social Services, as well as representatives from other human services agencies.

To gather input from older adults, persons with disabilities, and other stakeholders, several public meetings were held to discuss the identification of unmet needs, service gaps, and strategies. The public engagement allowed stakeholders and the public the opportunity to discuss and comment on the data gathered and suggest other information to be incorporated into the plan.

The first Advisory Committee meeting was held in May 2016. The initial meeting focused on defining the study area, delineating the transportation needs to be addressed by the plan, discussing potential plan results, and elaborating of specific characteristics of the communities within the study area. This conversation helped create an outline of the final plan.

Throughout the month of June 2016, a 14-question survey was developed and submitted to individuals and organizations to help identify transportation needs, gaps, and potential strategies. It was developed with input from TDOT and the Advisory Committee. The survey was posted online with a link provided on handouts to meeting participants to distribute to customers at their own agencies. The survey was also sent via email to identified potential stakeholders. A majority of the respondents were individuals answering on his/her own behalf. There were also a number of municipal and county government, private, non-profit transportation, human service agency, and federal human service agency respondents. Additionally, a few respondents identified themselves as members of civic organizations, health care providers, or as being part of the Area Agency on Aging and Disability. In addition, the Clarksville Urbanized Area MPO and Nashville MTA shared survey results from recently concluded surveys. These results helped supplement the findings of the survey conducted during the development of the plan.

The survey results helped inform the Advisory Committee of current service gaps and unmet needs. Some key information gathered from the survey illustrated the modes of transportation commonly used within the study area, as well as areas or places that are difficult to reach by transit or demand response transportation services. The survey information was used to refine the service gaps and unmet needs for future stakeholder and Advisory Committee meetings.

An Advisory Committee meeting and a series of public meetings were held in July 2016 in the cities of Clarksville, Murfreesboro, and Nashville. The focus of the public meetings was to expand on the known needs and identify additional service gaps and unmet needs. Information presented at the public meetings included the purpose of the study, descriptions of the type of services being discussed, defined study area, inventory of
service providers, area demographics, and previously identified service gaps and unmet needs. The attendees of the meetings were asked to expand on the needs and identify additional service gaps or unmet needs, as well as to highlight any strategies that might address existing transportation challenges. Meeting attendees were also asked to identify strategies that are more likely to be successful when applied to the study area. Together, the prioritized lists of needs and gaps and strategies/activities are meant to direct funding towards those strategies and activities that help communities eliminate the identified unmet needs and service gaps. The result was a locally-designed approach to addressing service gaps and unmet needs.

An Advisory Committee meeting was held in August 2016. The purpose of the meeting was to review survey results, the prioritized list of needs and gaps, and the prioritized list of strategies and activities. Attendees were asked to comment on the prioritized lists and correct any inconsistencies that did not align with existing plans or visions.

A final Advisory Committee meeting was held in September 2016. The meeting was held in Nashville. The focus of this meeting was to review the draft CPT-HSTP, and to collect final comments and recommendations. Advisory Committee members were also provided the opportunity to review the draft CPT-HSTP and provide comments via email. The feedback received was helpful in finalizing the plan in a manner that is reflective of the Mid-Cumberland area.

**Peer Review Documentation**

As part of the planning process, a peer-review of various coordinated plans was conducted (see appendix for more information). The following organizations’ plans were reviewed: The Indianapolis MPO, Mid-America Regional Council (Kansas City, MO region), Capital Area Regional Transportation Coordination Committee (Austin, TX region), and East-West Gateway (St. Louis, MO region). All of the plans featured an inventory of service providers, an evaluation of existing challenges and unmet needs, a prioritization of strategies, demographics of targeted populations, and a plan organizing strategies and activities that address the challenges affecting the study area. The plan from Austin features an analysis on how to direct funding sources to potential activities, and the St. Louis plan provides a comprehensive list of federal funding programs that directed funding to serving transportation disadvantaged populations. The Indianapolis plan followed the *United We Ride Framework for Action*. The Kansas City plan featured a unique method of identifying service deserts and also discussed an online resource database called Link for Care. Through coordination with the local transit authority, Link for Care functions as a one-click/one-call center for the Kansas City region. Another strong example of a one-call/one-click center is Transit 511, a one-stop phone and web source for the San Francisco Bay Area featuring traffic, transit, rideshare, and bicycling information. The Transit 511 website even features a trip planning tool that helps visitors, transportation disadvantaged populations, and others find the most-efficient way to travel around the region. These resources were helpful in forming the general form of the plan.
Figure 1. Mid-Cumberland Study Area

Source: Study area defined by the Advisory Committee.
Available Services
Service Providers

There are many types of transportation services in the study area. Whether they are public, non-profit, or private for-profit agencies, they all help ensure that older adults, persons with disabilities, and persons with low income are able to move around the region. This chapter provides an inventory of public transit providers, agency transportation providers, and private transportation providers. At the end of the chapter, there is a brief discussion about the various local entities that are currently coordinating service.

The various public, private, and human services transportation providers that operate within the study area are listed below. This inventory is an update of inventories from previous reports, as well as services that were identified through research and industry knowledge during the plan process.

Public Transit Providers

Public transportation is shared-ride transit services that are open to the general public and charge a set fare. There are generally two types of public transit: fixed-route and demand response transportation services. Fixed-route operates on a set schedule along a fixed alignment. Demand response transportation functions between origin and destination along the most efficient route possible, and scheduled pick-ups and drop-offs are prearranged between the customer and the service provider. Demand response transportation includes those services required by the Americans with Disabilities Act of 1990 (ADA).

In the Nashville area, MTA is the largest provider of transportation service. MTA operates fixed-route, ADA-complementary paratransit, and taxi services within 484 square miles in and around Nashville, Tennessee and serves an estimated 626,681 individuals. MTA provided 9.6 million passenger trips and accrued 8.8 million revenue miles in 2014. Other public transit providers within the Nashville area include Mid-Cumberland HRA, Middle Tennessee RTA, Rover Transit in the City of Murfreesboro, and the TMA Group that provides Franklin Transit and VanStar Vanpool services. The South Central Tennessee Development District is starting services in Maury County, and more information on this service may be available in the near future. Figure 2 shows service characteristics of each of the public transit providers in the Nashville area.

In the Clarksville area, CTS is the largest provider of transportation service. CTS operates fixed-route and ADA-complementary paratransit within 105 square miles in and around Clarksville, Tennessee and serves an estimated 135,471 individuals. CTS provided 733,752 passenger trips and accrued 1.45 million revenue miles in 2014. Other public transit providers within the Nashville area include Mid-Cumberland HRA and Middle Tennessee RTA. Figure 4 shows service characteristics of each of the public transit providers in the Clarksville area. Figure 3 shows various service characteristics of the public transit providers.

**Agency Transportation Providers**

Agency transportation services, also known as human services transportation, are services that are operated for the sole benefit of program participants. Traditionally, the agency operating the service has a core mission that is something other than transportation. Figure 5 lists the various agencies that operate transportation services in the Nashville and Clarksville areas.

**Private Transportation Providers**

Private transportation providers offer services that are not specifically for the general public and operate as for-profit entities. These services play a vital role in providing on-demand and/or niche services. Within the study area, private transportation providers can be categorized as private demand services, inter-city bus, or non-emergency medical transportation.

Private demand services consist of taxis, limousines/livery services, and rideshare services (e.g. Uber). There are 18 private demand services operating within the Nashville area and 11 private demand services operating in the Clarksville area. Figures 6 and 7 list the services operating in the Nashville and Clarksville areas.

There are two intercity bus companies that operate within the study area. Greyhound Lines, Inc. provides service to both the Nashville and Clarksville areas, and Mega Bus provides service to the Nashville area.

Non-emergency medical transportation services are a type of medically-related transportation that offer medical support to customers in non-emergency situations. These types of services can be hired for personal use, but are predominantly contracted with Medicare providers, hospitals, and other private facilities. Figures 8 and 9 list the NEMT services available in the Nashville and Clarksville areas.

Gaps Analysis and Unmet Needs
Transportation Disadvantaged Populations

Older adults, persons with disabilities, and persons with low income often have the most difficulty accessing transportation services. In the Mid-Cumberland area, these transportation disadvantaged populations have challenges finding transportation for medical trips, shopping/personal errands, and employment. The challenges may be that services are unavailable, insufficient, and/or inappropriate. Services may be insufficient in that the frequency of trips is too low. Service may be inappropriate in that services exist, but do not meet the needs of the rider, such as a wheelchair accessible vehicle. Services may be unavailable in that services do not exist in a specific geographic area or operate at specific times. To evaluate the service gaps and unmet needs of transportation disadvantaged populations, it is imperative to look at the impacted populations.

Older Adults

Title 49 of the United States Code defines older adults as individuals who are at a minimum 65 years old. There are approximately 216,926 older adults residing in the study area; of which 88.3% are in the Nashville area and 11.7% are in the Clarksville area. Figures 10 and 11 show the older adults populations in the Nashville and Clarksville areas. Figure 12 illustrates the density of older adult populations per square mile.

**Persons with Disabilities**

The Americans with Disabilities Act of 1990 utilizes the federal definition and states that an individual with a disability is a person who has a mental or physical impairment that limits a major life activity, has a history of such an impairment, or who is perceived by others as having such an impairment. There are approximately 220,869 individuals with disabilities residing in the study area; of which 85.0% are in the Nashville area and 15.0% are in the Clarksville area. The pattern in which persons with disabilities are dispersed throughout the study area is similar to that of older adults. Figures 13 and 14 show the population of persons with disabilities aged five years and older in the Nashville and Clarksville areas. Figure 15 illustrates the density of persons with disabilities per square mile.

**Persons with Low Income**

Census defines a person as having low income if an individual has a household income at or below the poverty threshold set annually by the Department of Health and Human Services. This means if a family of five living in the same household has an annual income below the poverty threshold, all five individuals would be categorized as having low income (see appendix for more information). There are approximately 279,117 persons with low income in the study area; of which 83.7% are in the Nashville area and 16.3% are in the Clarksville area. Figures 16 and 17 show the number of persons with low income that reside in the Nashville and Clarksville areas. Figure 18 illustrates the number of persons living at or below the poverty line per square mile. The population of persons with low income reside predominantly in urban areas. In the Nashville area persons with low income are more concentrated in Nashville, Murfreesboro, and other municipalities. In the Clarksville area, persons with low income are heavily concentrated in and around Clarksville and Hopkinsville.

**Population Change 2010-2025**

Figure 19 shows the projected change in population for the study area. The map illustrates a population growth for all of the counties within the study area. Williamson County is projected to experience a population growth of over 30%. Wilson County is projected to increase its population by more than 25%, and Montgomery and Rutherford counties are projected to have a population increase greater than 20%. Robertson, Sumner, and Trousdale counties are projected to increase in population by more than 15%. Dickson, Cheatham, and Maury counties are projected to experience a population increase between 10% and 14%, and the remaining counties are projected to experience population growth of less than 10%. The study area will also likely experience a growth in the older adult, persons with disabilities, and persons with low income populations. The percentage of persons with disabilities and persons with low income experiences little change over time. However, the population of older adults on the national scale is projected to increase 65% by 2020. This increase in the number of older adults could potentially require more transportation trips, and therefore increase the challenges of meeting the service needs of transportation disadvantaged populations.

Figure 19. Change in Population 2010-2025

Service Gaps and Unmet Needs

During the public engagement process, which included Advisory Committee meetings, stakeholder meetings, general public meetings, and a public survey that was administered to users in the study area, the transportation service gaps and the unmet needs of the transportation disadvantaged populations were identified. Figures 20 and 21 shows the unmet service gaps and needs, and whether that gap or need applies to the provider, user, or both. The gaps and needs were categorized into the following five topics:

► Information and Awareness
► Geographical
► Time-Based
► Client-Based
► Service Quality

Barriers and more detailed information about each of the service gaps and unmet needs are discussed below.

Information and Awareness

► Lack of public information regarding services: The greatest challenge for a customer is finding information about available services and learning how to use available services. It may be difficult to collect, consolidate, and disseminate the information on the various services, but enhanced communication regarding service providers may alleviate public concerns. Transportation providers can offer “rider’s guides” and how-to-ride videos and workshops to assist customers in learning how to utilize their services.

► Lack of provider participation in coordination: Coordination is strongest when there is a high level of involvement. The large geographical area and the restrictive nature of service areas make it difficult for transportation providers to coordinate services. Figure 23 shows overlapping service areas and Park and Ride locations; these could be used as transfer points for coordinated service delivery.

► Lack of intelligent transportation systems (ITS) and other technologies: Real-time access to data and service information could make service operations more efficient and responsive, and it could improve the trip planning capabilities of customers.

Geographical

► Lack of service to key activity centers: Transit systems should supplement the existing built environment and connect those places that customers frequently utilize. A transit system that connects key activity centers increases accessibility to needed or desired services; which, may be reflected in higher ridership and fare recovery ratio.

► Lack of coverage of rural areas and suburban communities: Long distances and low-density populations make rural trips expensive for transportation providers and customers. Suburban communities are often comprised of low-density planned unit developments with few access points to major thoroughfares; which, often results in higher cost commuter or express routes, or services with lower ridership. These areas are often prohibitive to frequent fixed-route service and results in increasingly expensive transportation services.

► Lack of accessible first/last mile connections: The distance between one’s trip origin or destination and the transit stop is known as the first and last mile. Connections to and from transit stops are a challenge for many customers. Making infrastructure improvements, such as ADA-accessible sidewalks or bicycle paths, and expanding demand responsive transportation options can help alleviate the challenges caused by inaccessible first and last mile connections.

► Lack of coordination between land use and transit services: Coordinating land use development with existing or potential transit services can create greater accessibility to retail and service locations, as
well as transit services. Placing retail and office fronts adjacent to sidewalks and bicycle- and transit-friendly roadways may increase business traffic, access to community services, and transit ridership.

- **Need for better services to Nashville and Murfreesboro:** Many of the services utilized by Clarksville area customers are located in Nashville or Murfreesboro. The availability of services for trips to either city are few and limited. Encouraging coordinated service delivery among the operators that serve the corridor or redirecting funding to create new services could address customers’ needs.

**Time-Based**

- **Lack of night and weekend service:** Individuals working twilight or night shifts often do not have transportation services available to them for return trips. Without weekend service, individuals relying on transportation services have limited access to their communities. Figure 22 shows the hours of service for public transit providers within the study area.

**Client-Based**

- **Lack of accessible services for persons with disabilities:** Transportation providers have a difficult time fulfilling the needs of their customers, and fewer wheelchair accessible vehicles limit the mobility of non-ambulatory residents.
- **Lack of amenities at transit stops:** Transit amenities can make customers feel safe and welcomed. Ensuring that ample lighting and shelters or benches are provided can increase the quality of services.
- **Lack of services for youth and children:** Transit-dependent families may have unique challenges getting children to school or daycare in areas where transit is insufficient or non-existent. Seasonal and temporal challenges exist when youth and children are out of school. Creating a discount youth transit pass program can alleviate the challenges and reduce costs for customers.
- **Lack of bicycle and pedestrian infrastructure and accessibility:** A challenge for many transportation providers is the coordination and connectivity with other modes of transportation. Some common challenges include: lack of safe bicycle/pedestrian pathways in low-income areas, lack of infrastructure (e.g. crosswalks, sidewalks, and bike lanes), lack of signage and wayfinding information, and lack of connecting bicycle lanes and bicycle storage facilities at high-volume transit stops.
- **Lack of services for veterans:** Veterans have a variety of transportation challenges. One of the most difficult challenges for veterans is connecting to medical and health centers, including those sponsored by the Veterans Affairs Administration. Coordination between Veterans Transportation Services and other transportation providers may resolve a few of the logistic-based challenges faced by Veterans.
- **Lack of affordable transportation options:** Transportation services are too expensive for portions of the population. It may prove a viable solution to create low-income pass programs, offer higher subsidies for transportation services to persons with low-income, or create a lower cost pass for a shorter period of time.
- **A sense of insecurity near transit stops and on transit vehicles:** Safety and security are important to customers and transportation providers alike. Safety can be improved by working with law enforcement to provide proper safety training to operators, as well as developing safety-specific programs, such as having police aboard transit vehicles.

Service Quality

- **Increased number of public transportation vehicles to provide service**: Ensuring the proper transportation is available to customers is a key tenant of being a transportation provider. Having too few vehicles can mean more costly trips and increased numbers of complaints as vehicles are not properly dispersed throughout the service area.

- **Lack of services above and beyond what is required by ADA**: ADA-complementary service alongside local fixed-route service is required by federal regulation, but customers may need to access services and parts of the community beyond the required 3/4-mile buffer. Transportation and service providers should coordinate to ensure that services are provided throughout the region. Furthermore, organizations in charge of dispersing federal and state funding should consider creating criteria that encourage transportation providers to expand or add new service areas where service is insufficient or non-existent.

- **Low frequency of services**: Infrequent services are challenging and stressful to customers. If a service has long headways, the customer must be aware of the schedule and be sure to be at the transit stop on time or face a long wait time for the next vehicle. Transportation providers may want to evaluate ridership, current headways, and service budgets to see the feasibility of increasing service frequency.

- **A sense that riders’ needs are not being met**: An individual’s disability is a personal disability, and two individuals with the same disability may need different levels of assistance in utilizing services. Transit providers should train individuals that interact with persons with disabilities in the ways to properly address the needs of persons with disabilities.

- **Lack of transportation alternatives in some areas**: Transportation services in some areas of the region are insufficient, unavailable, or inappropriate. Funding should be directed towards providing services where service deserts exist, and transportation providers should coordinate to provide transportation where service is needed most.

**Prioritization of Service Gaps and Unmet Needs**

Two public meetings and an Advisory Committee meeting were held where participants conducted an interactive exercise to prioritize service gaps and unmet needs, and identify potential strategies to meet those gaps and needs in the study area. This activity was conducted in Nashville and Clarksville. Following the meetings, each response was scored by the project team in order to determine high, moderate, and low priority service gaps and needs. Service gaps and unmet needs marked high-priority were given three points, those marked moderate-priority were given two points, and those marked low-priority were given one point. Then the scores were totaled, and gaps and needs were ranked by the project team. Figures 24 and 25 illustrate the service gaps and unmet needs for both the Nashville and Clarksville areas as being high-, moderate-, or low-priority.

Strategies and Activities
Strategies for Meeting Identified Needs

Following the prioritization of gaps and needs within the study area, a set of broad strategies and activities were identified. Rather than focusing on a set of specific projects, these strategies and recommendations are intended to complement or supplement a range of projects that consider the overall public transportation needs of the general public while focusing on the needs of targeted populations. Additionally, projects are more likely to succeed through collective efforts and local buy-in. The following are potential strategies to address the service gaps and needs that have been identified.

Information and Awareness

► Explore the development of a local coordination policy body/council.
► Explore the development of a one-stop transportation traveler call center to coordinate services.
► Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.
► Host how-to-ride workshops.
► Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.

Geographical

► Evaluate current accessibility to transit stops and identify ways to improve first-/last-mile connections.
► Review service routes and expand service to key activity centers currently underserved or not served by transit, paratransit, or service agencies.
► Coordinate service delivery among lower density areas.
► Evaluate existing land uses near transit centers and identify ways to effectively coordinate land use with transit services, such as transit oriented development.
► Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed.

Time-Based

► Expand or shift hours to include weekend service.
► Expand transit, paratransit, and service agency hours to include evening service.

Client-Based

► Evaluate existing services for persons with disabilities and identify areas of expansion.
► Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops.
► Evaluate existing services for youth and children and identify areas of expansion.
► Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians.
► Evaluate existing services for veterans and identify areas of expansion.
► Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnerships, and payment adjustments.
► Evaluate current security on transit services and identify ways to increase security on vehicles.

Service Quality

► Evaluate current service frequencies and identify ways to increase frequency of services.
► Evaluate existing transportation alternatives and identify ways to expand transportation options.
► Evaluate existing paratransit and demand responsive transportation services and identify areas to expand services.
► Evaluate riders’ experiences and identify ways to better meet riders’ needs.
► Identify funding to purchase transportation vehicles for increased service.

Short-term Strategies and Activities

The Nashville and Clarksville areas have different demographics, geography, and funding methodologies, it follows that each area has a different prioritized list of service gaps and unmet needs. To address the gaps and needs, various strategies and activities have been identified and described uniquely for each area. Some gaps and needs would likely take years to address, while others can be done in the near-term. For that reason, strategies and activities are classified as either short-term or long-term. The short-term strategies and activities help develop momentum and create a better opportunity for the success of long-term strategies and activities. Along with each strategy or activity is a basic analysis of potential funding sources. Figure 26 shows the short-term strategies and activities best suited to address the unique challenges of each area.

Each description below discusses the service gaps and unmet needs met by the specific strategy or activity. There is also a brief discussion of what type of funding may best support the strategy/activity, as well as a statement on what entity may be the responsible party to oversee the implementation of the strategy.

Explore the development of a local coordination policy body/council.

A local council or body that focuses specifically on policy and planning issues for transportation disadvantaged populations can help improve coordination among service providers. The council would consist of local stakeholders: public and private transportation providers, human services providers, local/regional government, funding sources, and customers that utilize the services. Bringing these groups together creates an environment where region-wide policy, coordination planning, and partnership decisions are developed by those who have a unique and deep understanding of challenges faced by transportation disadvantaged populations. This policy body would play an integral part in developing consistency among providers’ practices, gathering information to feed into a one-call/one-click center component. This body could also assist in developing planning activities, public education efforts, and workshops that reach target audiences in a meaningful way.

This should be seen as an opportunity to attract public and private service providers who have not been involved in regional service planning. Previously uninvolved private entities may be able to assist public service providers by assisting with niche challenges, like on-demand service, and the public providers may be able to assist private organizations through service delivery as a way to increase customer retention. The costs associated with developing and administering a local policy body are relatively low and are mostly associated with necessary staffing and materials to facilitate regularly scheduled meetings. This makes the cost flexible, and therefore, the development of a council adaptable to the administering body.

Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.

The two greatest challenges for new service customers are finding out what service to use and how to use that service. Enhancing planning activities and public education efforts can increase the awareness of services to transportation disadvantaged populations by providing them with targeted information and assisting them with the initial eligibility and registration requirements. Furthermore, local stakeholders can work together to identify local challenges and develop materials that help customers overcome those challenges. A part of the education efforts can be directed towards providing how-to-ride guides and having staff available to discuss ride options with customers. Building a pointed public education campaign with distinct goals would help create a consistent and concise message that is suited to the region, and identify public events and outreach locations to interact
with the target audience. Public education efforts aimed at transportation disadvantaged populations are considered mobility management and eligible for Section 5310 funds.

Host how-to-ride workshops.

A large number of service customers have difficulty accessing new types of vehicles or using new services that have been made available to them. Developing a presentation around how-to-ride various services in the region, and then hosting a series of workshops, or by invitation, would help alleviate the stress many customers feel when first riding a service. It is important to develop easy to understand materials that feature important steps of using a service and agency contact information. Another method is to create a short video or record the how-to-ride presentation, and posting the video on agency websites and/or a website like YouTube. The materials needed to create a how-to-ride presentation could be considered educational in nature and eligible for Section 5310 funds, but a majority of the costs associated with the workshops would be associated with staffing.

Evaluate current accessibility to transit stops and identify ways to improve first-/last-mile connections.

Customers of fixed-route transit may have difficulty accessing transit stops. Accessibility from one’s home to the chosen transit stop is often referred to as the first- and last-mile. These connections can be a challenge for a variety of reasons: sidewalks may not exist or may be in disrepair, existing road or land use system may prevent access, or the transit stop may be too far from the trip origin. Conducting an evaluation of a select number of transit stops may help the transit provider identify the root cause of accessibility challenges. Should the challenge be sidewalks, the transit provider may want to work with city officials and employees or neighborhood organizations to develop a plan to build or repair sidewalks. If the challenge is a question of distance or a lack of connectivity, the transit provider may want to work with other transportation stakeholders and attempt to identify innovative transportation solutions that link customers to the fixed-route system. Some innovative concepts to consider may include: micro-transit, service agreements with other existing providers, or partnerships with taxi or ridesourcing companies.

Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed.

A challenge for many customers living in rural and exurban areas is commuting to larger metropolitan centers for medical appointments, work, or entertainment. It may be best for transportation providers to work together and identify existing services that commute to metropolitan centers. Should services be deemed ample enough to meet customer demand, it may be beneficial to ensure that services are being advertised to potential clientele, and to develop a process for transportation providers to communicate with one another regarding trips that are difficult to provide. If services are insufficient to meet demand, transportation providers may want to consider utilizing Section 5307 or Section 5310 funds to develop a service that addresses the specific need of customers to commute long distances to metropolitan centers.

Expand or shift hours to include weekend service.

Weekend service can increase opportunities for customers to connect with their community, but it can be costly for a transportation provider to expand their hours. An onboard survey or customer survey would help identify if there is enough customer interest to begin providing weekend service. When possible, it may be best to reorient service hours to better suit customer needs. If a service provider decides to add weekend service,

---

**Case Study: UTA How-To-Ride Training Seminars**

The Utah Transit Authority (UTA) in Salt Lake City provides how-to-ride presentations and training seminars upon request. The presentations inform potential customers of how to get to & from the bus stop, reading route maps and schedules, landmark identification, safe travel practices and how to board the various transit services. UTA also posts videos on how to use the bus, streetcar, and commuter rail. The how-to-ride seminars are meant to increase confidence and independence through the use of transit.
they may need additional funding. For paratransit and service agencies, Section 5310 funds could be used to bolster service. Fixed-route transit may require repurposing of existing funds in order to expand service.

**Expand transit, paratransit, and service agency hours to include evening service.**

Service hours can limit potential customer use of transit, but it can be costly for a transportation provider to expand its hours. An onboard survey or customer survey would help identify if there are routes/locations where customers may benefit from schedule adjustments. When possible, it may be best to reorient service hours to better suit customer needs. If a service provider decides to expand service hours, they may need additional funding. For paratransit and service agencies, Section 5310 funds could be used to bolster service. Fixed-route transit could potentially repurpose existing funds in order to expand service hours where needed. Another approach, that could increase fare revenues to support new service hours, would be to work with employers in the region to develop an employer pass program. Through a commuter benefit program, employers can save money on payroll taxes, employees can decrease their commute costs by utilizing pre-tax wages to buy transit passes, and transit providers can increase fare revenues and service ridership through the increased sale of transit passes.

**Evaluate existing services for persons with disabilities and identify areas of expansion.**

In order to ensure there are ample services for persons with disabilities, an evaluation of existing services would be performed. As part of this evaluation it would be ideal to examine the service areas, service hours, eligibility requirements, fleet size, fares, and cost per trip for the provider, as well as other service characteristics. The goal is to identify what aspects, if any, of the service providers are creating challenges for persons with disabilities that are looking for transportation. The actual task of evaluating the existing services may have additional costs. Existing staff may be able to carry out the evaluation; if not, a mobility coordinator or other hired personnel could do the work on behalf of the area in question. Depending on the findings of the evaluation, many facets of improved coordination or fleet expansion are eligible for Section 5310 funding. Reasonable accommodation should also be considered to give transit providers the ability to make reasonable decisions.

**Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops.**

Many customers find using public transit to be an unwelcoming and uncomfortable experience. Having amenities at and near transit stops can improve the way customers perceive transit. Some of the amenities that can improve the customer experience is to ensure that there is ample lighting, seating, and protection from weather elements. Transit providers should evaluate the transit stops to identify if there are any real or perceived challenges with utilizing the transit services. The addition of lighting can make customers feel safe. Shelters and wind blockers can protect customers from excessive sunlight, wind and cold. Having benches available can add an increased sense of comfort, and prove to be a valuable asset for older adults and persons with disabilities. Furthermore, access points and transit stop landings can be made more navigable by older adults and persons with disabilities by ensuring that there is only a slight gradient to the pavement and by using materials that do not heave over time; these types of improvements, if accounted for at the onset, add little to no charge to development costs. Accessibility improvements are eligible for Section 5310 funds.

**Evaluate existing services for youth and children and identify areas of expansion.**

A challenge for many parents, especially those living in zero-car households, is ensuring their children are able to get to school, daycare, or elsewhere. In many instances, it is an added challenge to a parent’s work commute as it is imperative to ensure a child is taken to his or her destination prior to continuing on to work. A few successful programs that aim to provide affordable transportation to children are free fare programs for school-aged children year-round and summer programs that offer highly-subsidized unlimited-ride monthly passes for
children. It may be beneficial for transit providers to define the eligible population to ensure that there is ample funding to address the targeted population. These types of programs are eligible for Section 5307 funds.

Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians.

Accessibility to one’s community is a challenge for many people. Some individuals’ only ways of carrying out necessary trips require a personal vehicle or door-to-door transportation. Many of those same individuals would be able to utilize fixed-route transit if there were improved bicycle paths and pedestrian sidewalks. Multimodal connections can increase accessibility to transit, and create healthier, more environmentally friendly transportation options. Transportation providers should consider evaluating where bicycle and pedestrian pathways are located and how well those pathways connect with the existing transit system. Once key areas where improvements can be made are identified, transportation stakeholders should work together to apply for MAP-21 Transportation Alternative Program funds and FAST Act Surface Transportation Block Grant Program funds.

Evaluate existing services for veterans and identify areas of expansion.

Veterans often have the same mobility challenges as older adults, persons with disabilities, and persons with low income. Veterans, despite their trip origins, often have similar destinations; for example, the nearest Veterans Affairs Medical Center (VAMC). In recent years, the Veterans Affairs Administration has attempted to address the mobility challenges of veterans by putting in place its own transportation service and allowing veterans to visit doctors outside of the VAMCs. Transportation providers and stakeholders should partner with the local Veterans Affairs Administration representatives to evaluate where services are currently located and what are the unmet needs of veterans. The areas in which service is currently unavailable may be best served by developing partnerships between the Veterans Affairs Administration and existing transportation providers, and by helping veterans better understand the current transportation system through dissemination of information and enrollment assistance.

Evaluate current security on transit services and at/near transit stops, and identify ways to increase security on vehicles.

Safety is the most critical component of providing transportation services. Whether it is the safety and security of the riders or the vehicle operators, transit agencies go to great lengths to ensure the wellbeing of all individuals within a vehicle. As security issues have increased in recent years, transportation providers should consider evaluating the security on their transit vehicles. Should any issues be discerned, transit agencies should take measures to address security through necessary policies, safety equipment purchases, and operational training.

Evaluate current service frequencies and identify ways to increase frequency of services.

Infrequent service can decrease customer satisfaction by reducing how reliable the service appears to the customer. Truly infrequent service may cause customers distress by requiring them to leave for destinations well before the time in which they need to be there. Transit providers should evaluate the current service headways and identify if certain routes may need increased frequencies. Additional funding may be difficult to find, and therefore, any evaluation should also try to identify areas where service may be reduced and funding reallocated. A reliable service with frequent, fixed headways may help assure customers that their bus will get them to their destination when they need to be there.

Evaluate riders’ experiences and identify ways to better meet riders’ needs.

Each customer’s experience on a transportation trip is different from anyone else’s trip. For this reason, each person may have different needs that need to be addressed before, during and after a trip. To ensure that customers are receiving the needed assistance, transportation providers should survey customers and vehicle
operators to discover what specific needs exist. Once needs are identified, proper training should be provided to vehicle operators to help them identify and attend to specific needs of customers.

**Identify funding to purchase transportation vehicles for increased service.**

Transportation services often need to be maintained or bolstered in order to provide quality service. With an aging population in the region, the number of persons requiring transportation services is growing. Section 5310 program allocates funding for capital purchases, such as vehicle purchases or capital transit improvements, operation of voucher programs and non-profit services, and other uses, like mobility management practices. It would be beneficial for transit providers and human services agencies to budget appropriately to ensure that they are able to meet local matching requirements and apply for the appropriate funds when needed. Section 5310 should be budgeted consistently for small urban and rural areas, and funds transferred to rural areas when funding is available.

**Long-term Strategies and Activities**

The long-term strategies and activities focus on concepts that may take longer to implement or require previous short-term actions to have been employed. The long-term strategies and activities consider long lasting challenges to the area and may have a stronger effect on existing operations. Much like short-term strategies and activities, the long-term response to challenges differ from one area to another. Figure 27 illustrates those strategies/activities to address the challenges of each area.

Each description below discusses the service gaps and unmet needs met by the specific strategy or activity. There is also a brief discussion of what type of funding may best support the strategy/activity, as well as a brief statement on what entity may be the responsible party to oversee the implementation of the strategy.
Explore the development of a one-stop transportation traveler center to coordinate services.

The implementation of a one-call/one-click center is an effective way to make transportation services more customer-friendly. The main benefit of a one-stop transportation traveler center is the consolidation of service information. A fully realized center could feature one website, one phone number, and one location for all of a customer’s transportation needs. The first step to developing a one-call/one-click center is to gather the service information of all of the region’s transportation providers and placing that information in an easy to use directory. This resource can be placed online or used by call center representatives to help direct callers to the service that best suits the needs of each caller. A one-call/one-click center is a mobility management tool that is eligible for Section 5310 funding. A one-stop traveler center may have ample start-up and operation and maintenance costs, so it is best to develop this concept in phases. The one-call/one-click center could be housed in an agency with a regional call center and website or be an independent facility.

Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.

There are a variety of technological tools that can increase interaction between operators and customers. Whether it is intelligent transportation systems (ITS), such as digital signage on the highway or at bus and train stations that give real-time arrival information, or mobile or web-based applications that inform customers of various system characteristics. An evaluation of current ITS infrastructure and existing mobile and web-based applications will help stakeholders weigh existing technological advancements against desired technological advancements and develop a plan for further integration of technology into a region-wide transportation system. A digital road map is a plan that evaluates a region’s technology desires. These road maps have become quite the trend in assisting transportation systems come into the 21st century. Technological advancements that inform customers of real-time arrival, vehicle locations, or allow customers to purchase fare media via a mobile device or website have been proven to increase customer satisfaction and may lead to increased ridership. Technological purchases are eligible for Section 5309, Section 5310, and Section 5339 funds as well as various discretionary funding opportunities. It is important to keep in mind that technology purchases often carry a large up-front capital cost, but have smaller operation and maintenance costs over time.

Review service routes and explore expanding service to key activity centers currently underserved or not served by transit, paratransit or service agencies.

To understand if an agency’s service area is best serving its customers it would be beneficial to evaluate existing service areas and the customers’ perspective on existing service areas. An analysis of existing service areas should illustrate the location of service deserts, areas where there are not any service. An on-board/off-board survey or customer survey would also help identify if there are areas not being served that customers wish to go. The goal of the service area analysis is to look at three key challenges in the region: coverage of rural areas and suburbs, providing better service to activity centers, and ensuring there are ample services for transportation disadvantaged populations.

When deciding on the type and level of service that may best serve a given area, the transportation provider would need to balance the costs and benefits of expanding the service area against portions of the existing service area that are performing lower than the rest of the system. It may be decided that it is best to not expand service and look at other options, like partnering with another provider to deliver service to that area.

Case Study: San Francisco’s Transit 511

The Transit 511 website in the San Francisco – Bay Area features information on a variety of transportation providers in the region. Customers can either call 511 to talk to an operator or they can go the website and access the information. Other key characteristics on the website include: a trip planner, real-time departures, schedules, maps, fares, and general travel and transit information.
Providing service to activity centers that are also job centers may allow transportation providers some leverage with employers. If there are a significant number of workers from a specific employer or business park, then the transportation provider might be able to develop an agreement on providing service to the area in exchange for them signing up for an employer pass program. The commuter benefit associated with an employer pass program allows employers to save money on payroll taxes, employees to decrease their commute costs by utilizing pre-tax wages to buy transit passes, and transit providers to increase fare revenues and service ridership through the increased sale of transit passes.

In some instances transportation disadvantaged populations are not offered transportation services that meet their needs. Some challenges are resolved by increasing service hours or purchasing new vehicles to offer more service, but sometimes the challenge is that the available service does not provide transportation to the trip origin, trip destination, or both. A transit agency would then need to evaluate the costs and benefits of expanding services to assist the individuals in need, or the transit agency could work with peer agencies to coordinate a service transfer or suggest individuals register for service with another agency.

In all instances the transit providers should work together for cost-effective solutions that ensure safe service delivery. There may be significant staff costs to continually carry out this level of trip planning and problem solving. When the solutions do not come from route or service realignments, a mobility coordinator would be a great resource to help coordinate difficult trips and negotiate potential service partnerships.

**Consider coordinating service delivery among lower density areas.**

A transportation agency should evaluate its service area to see if the agency is best serving its customers. The analysis should analyze existing service areas and investigate the location of service deserts, areas where there are not any service. The next step is for a transportation agency to decide on the type and level of service that may best serve a given area. If the costs of providing the service outweigh the potential benefits, the transportation agency should seek other transportation agencies or providers in the area currently providing service, and evaluate developing a partnership to ensure customers in the area have ample access to their community. By coordinating and connecting service areas through memorandums of understanding or service agreements, the transportation providers can assure customers are able to meet their day-to-day needs. In many instances, operational assistance may be needed to provide such services. If the services are for transportation disadvantaged populations, service operations are an eligible Section 5310 expense.

**Evaluate existing land uses near transit centers and identify ways to effectively coordinate land use with transit services, such as transit oriented development.**

When land use and transit systems are disconnected, it is often more difficult to attract choice riders to the transit system, but when there is a dense mix of residential, commercial, and office space near a transit stop, all types of riders are drawn to the transit system. Transit providers should consider evaluating the types of land uses at and near key transit stops. If it is proven that the transit stop do not align well with the types of land uses near the transit stop, the transit provider should begin to identify certain mechanisms that may help to promote a healthier combination of public transportation and land use. A few methodologies for improving the relationship between land use and transit is to work with city officials to encourage land use polices that promote mixed-use development and to begin developing partnerships with city planning staff and private developers to encourage incorporation of transit into new land uses or existing land uses when being redeveloped.
Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnerships, and payment adjustments.

An operating budget is a finite source that allows only so much service. This means that any new demand or identified needs or gaps would require additional or reallocated funds to ensure demands and issues are addressed. To potentially free up existing funding, transit providers should evaluate the costs associated with providing its own service, as well as the costs associated with providing the same trip with alternative modes of transportation. Once a baseline cost per trip is identified, transit agencies may wish to consider which services are less costly to operate, and begin utilizing mobility management practices to differentiate service delivery among multiple modes of transportation. By shifting trips to less costly modes of transportation, transit agencies can free up a portion of the operating budget to allow for increased or currently unmet service demands. An initial first step may be to create a mobility management plan that looks at the current services and operating costs, and begins to prioritize and plan methods for orienting service delivery across multiple modes.

Evaluate existing transportation alternatives and identify ways to expand transportation options.

Transportation of today features a range of alternatives. There are fixed-route, flex-route, micro-transit, and paratransit services, as well as on-demand e-hailing services, ridesourcing options, bike sharing, and smaller personalized agency-based services. Figuring out which type of service is best for a specific trip is considered mobility management. Transportation providers should work together to evaluate what types of services currently exist in the study area, as well as what are the specific needs of customers. Knowing the existing service and customer needs will allow transportation providers the opportunity to develop a mobility management plan that identifies and prioritizes which services should be expanded and receive additional resources. There are a variety of federal funding programs that can be utilized to help develop mobility management practices and bolster service operations.

Evaluate existing paratransit and demand responsive transportation services and identify areas to expand services.

Transportation services often need to be maintained or bolstered in order to provide quality service. With an aging population affecting the region, the number of persons requiring transportation services is growing. The Section 5310 program allocates funding for capital, such as vehicle purchases or capital transit improvements, operation of voucher programs and non-profit services, and other uses, like mobility management practices. Regional stakeholders and transportation providers should prioritize what projects to fund in a manner that addresses unmet needs and gaps. It would be beneficial for transit providers and human services agencies to budget appropriately to ensure that they are able to meet local matching requirements and apply for the appropriate funds when needed.
Next Steps
Funding Resources

In addition to the relatively brief list of potential funding resources described below, Appendix D offers a more comprehensive list of grant programs and other funding possibilities. Agencies and non-profits should consider the application of these various funding resources in order to implement the plan’s recommended strategies and activities.

Enhanced Mobility of Seniors and Individuals with Disabilities Program (Section 5310)

The Section 5310 Program is administered by the Federal Transit Administration. Established under the previous Surface Transportation Legislation, MAP-21, the Section 5310 Program allocates funding for capital and operations projects that provide transportation services to older adults over the age of 65 and persons with disabilities. With the passing of the latest Surface Transportation Legislation, the FAST Act, is expected to continue and to function in similar capacity as it did under MAP-21.

Eligible direct recipients of Section 5310 Program funds, in urbanized areas of 200,000 or more, are either the direct recipient of Section 5307 Program funds or a transit agency. For rural areas and communities with a population less than 200,000, the direct recipient is the governor of the state or a state-appointed agency, such as the state Department of Transportation. Subrecipients are those entities who are eligible to receive funding through the designated direct recipient for an area. Eligible subrecipients include: private nonprofit organizations; or state or local governmental authorities that are approved by a state to coordinate services for older adults and persons with disabilities, or such authorities that can certify that there are no nonprofit organizations readily available in the area to provide the service.

Other Federal Programs and Tax Incentives

A study was performed by the United States Government Accountability Office (GAO) to identify federal programs which are authorized to fund transportation services for the transportation disadvantaged. Many of the programs identified were administered by federal agencies other than the Department of Transportation (DOT) although transportation is not their primary mission. Most of the programs identified provide a variety of human services, such as job training, aging, education, community services, vocational and rehabilitation services, services for veterans or medical care, which incorporate transportation as an eligible expense in support of program goals.

On February 24, 2004, Presidential Executive Order 13330 was issued in response to the results of the study. This led to the formation of the Coordinating Council on Access and Mobility (CCAM). The CCAM is an interdepartmental Federal Council on Access and Mobility to undertake collective and individual departmental actions to reduce duplication among federally-funded human service transportation services, increase the efficient delivery of such services and expand transportation access for older individuals, persons with disabilities, persons with low-income, children and other disadvantaged populations within their own communities. The order establishing CCAM recognizes that transportation plays a critical role in providing access to employment, healthcare, education, community services, and activities necessary for daily living, and that transportation services are often fragmented, underutilized, or difficult to navigate, and can be costly because of inconsistent, duplicative, and often restrictive federal and state program rules and regulations. Members of the CCAM include the Department of Veteran Affairs (VA), Department of Transportation (DOT), Department of Health and Human Services (HHS), Department of Labor (DOL), Department of Education (DOE), Department of Interior (DOI), Department of Housing and Urban Development (HUD), United States
In addition to the grant programs administered through federal agencies, there are a few tax breaks and incentives that award coordinated planning activities. Several of these programs are the Qualified Transportation Fringe Benefit, The Work Opportunity Tax Credit (WOTC), and the Ticket-to-Work Program.

The transit commuting benefit at Section 132(f) of the Internal Revenue Code, better known as the Qualified Transportation Fringe Benefit provides tax breaks for employers that provide transportation services to their employees such as rideshare services, transit passes, parking, and expenses incurred to facilitate bicycle commuting. The Work Opportunity Tax Credit which is administered by the DOL, helps targeted workers move from economic dependency into self-sufficiency as they earn a steady income and become contributing taxpayers, while participating employers are able to reduce their income tax liability. The targeted groups include veterans, TANF recipients, SNAP recipients, SSI recipients and those with general disabilities. The Ticket to Work program is a free and voluntary program that can help Social Security beneficiaries go to work, get a good job that may lead to a career, and become financially independent, all while they keep their Medicare or Medicaid. Individuals who receive Social Security benefits because of a disability and are age 18 through 64 probably already qualify for the program. Reimbursement for transportation costs are eligible expenses of this program.

**State and Local Funding**

Currently, most transit providers in the study area receive the majority of their funding from Federal programs, or, to a limited extent, State sources. The region’s HRAs and private transit providers receive little funding assistance locally, if any.

Funding from state and local authorities may come from a variety of sources including sales taxes, property taxes, income taxes, vehicle registration fees, concessions, lottery and casino revenues, cigarette tax, vehicle leasing and rental fees, parking fees and fines, hotel/motel taxes, utility fees, and Tax-increment Financing Districts. All or portions of the funds collected through these various sources could be dedicated to transit agencies, HRAs, and private transit providers (assuming the private operators fulfill a public service in line this plan). In general, an increase in State or local funding would reduce transit providers’ reliance on Federal grant programs, and thereby enable providers to better produce long-term plans and budgets.

**Public Private Partnerships**

The existing levels of coordination and relationships that exist within the region can be expanded upon to leverage resources where inefficiencies exist. The public private partnerships that exist within the region come in many forms. There are a variety of nonprofits whose mission is to improve the lives of the population groups targeted of this plan. These groups can provide volunteer, fundraising and advocacy services. Additionally, the outreach of various organizations as well as local groups, such as the Chamber of Commerce, can be leveraged to help promote awareness regarding the transportation disadvantaged.
Conclusion

This plan focuses on creating a tailored response to the information gathered through general public meetings, public outreach efforts, stakeholder expertise, and data research. The plan has been completed in a manner compliant with the federal surface transportation legislation, Moving Ahead for Progress in the 21st Century (MAP-21). This plan assesses the available transportation services, identifies the service gaps and unmet needs of transportation disadvantaged populations, provides strategies for meeting those gaps and needs, and prioritizes transportation strategies and activities for funding and implementation.

After the adoption of this plan, Tennessee Department of Transportation, the Nashville Area and Clarksville Urbanized Area MPOs, and Metropolitan Transit Authority will monitor transportation issues in the region to determine how the strategies described in this plan may apply to ongoing planning efforts. Changes to existing transit conditions could require the addition, deletion, or re-prioritization of strategies or projects in the future in accordance with local policies and procedures. The Clarksville Urbanized Area MPO and the Nashville Area MPO will lead the effort to sustain the Advisory Committee through future initiatives.

Carol Wilson, Metropolitan Social Services
Laura Dieckhaus, Mid-Cumberland HRA
Kathy Zamata, Tennessee Commission on Aging & Disability
Sarah Frost, TranSystems
Tyler Means, TranSystems

Project Introduction

Mr. Aboagye welcomed everyone to the first Advisory Committee (AC) meeting, and explained how this meeting begins the process of updating the Coordinated Public Transit – Human Services Transportation Plan.

Ms. Frost and Mr. Means introduced themselves and provided an overview of the project content and the materials to be covered during the meeting. The AC members in attendance introduced themselves.

The project will meet all federal requirements and include additional items agreed upon by the AC. There will only be one plan, but the plan will separate, when necessary, information as it pertains to the Nashville and Clarksville study areas.

Action Item: Work with TDOT to identify representatives of private non-profit services, private for-profit services, and rural transportation brokerage providers to be part of the AC.

Study Area

The AC members discussed what counties should be included in the study area. The original study area presented to the AC included the following counties:

- In the Nashville Study Area: Davidson, Robertson, Sumner, Macon, Trousdale, Smith, Wilson, Cannon, Rutherford, Williamson, Maury, Hickman, Dickson and Cheatham.
- In the Clarksville Study Area: Montgomery and Stewart in Tennessee, and Christian and Trigg in Kentucky.
The AC confirmed that services are shared between Montgomery and Stewart Counties in Tennessee and Christian County in Kentucky, and that services are not delivered to nor is there a relationship with Trigg County in Kentucky. Trigg County will be removed from the Clarksville Study Area.

The AC confirmed that Davidson, Robertson, Sumner, Trousdale, Smith, Wilson, Rutherford, Williamson, Dickson and Cheatham should be included in the Nashville Study Area. The AC also stated that Humphreys and Houston Counties should be added to the Nashville Study Area.

Action Item: Confirm the following counties in Tennessee for inclusion in the Nashville Study Area: Hickman, Maury, and Macon.

Area Demographics

Ms. Frost presented on the various demographic data that would be gathered for the study area. This includes demographic information on older adults, persons with disabilities and persons with low income. In addition, the Coordinated Plan will provide a future population forecast of the study area in the year 2025. The population forecast will help to illustrate where all populations are likely to increase. The demographic data was gathered from the Census American Community Survey, 2014 5-year Estimates. The population forecast for each county in Tennessee was gathered from Population Projections for the State of Tennessee 2010-2030, which is published by the Center for Business and Economic Research at the University of Tennessee. The population forecast for each county in Kentucky was gathered from Population Projections for the State of Kentucky 2010-2050, which is published by the Kentucky State Data Center at the University of Louisville.

The AC expressed approval for using Census American Community Survey to gather the necessary demographic data. There was discussion about possibly using existing population forecasting data from the Nashville Area and Clarksville MPOs. Both MPOs utilize Woods and Poole data for their respective population forecasts. It is possible to utilize that data, as long as the same data is available for all counties in the study area and TDOT approves the methodology.

Action Items: 1) Confirm with each MPO to see what counties are covered by each’s population forecasts. 2) Confirm with TDOT that it is okay to use Woods and Poole population forecast data, and the methodology of gathering population forecast data for any county not covered by either of the MPOs.

Necessary Data

Mr. Means provided an overview of the types of data that will need to be gathered to complete the project. TranSystems will work with the AC to identify service providers that provide transportation services within the study area. The list of service providers will include human resource agencies, public transportation providers, public non-profit service providers, private non-profit service providers, and private for-profit service providers. Additionally, TranSystems will work to gather service characteristics of public transportation providers and other key service providers in the study area.

Mr. Means mentioned that the Coordinated Plan could also include other data that pertains to the provision of transportation services. The AC requested that information on park and ride lots be included.

Action Item: Gather GIS mapping files or location information for park and ride lots in the region, and work with the AC to build a comprehensive service inventory.
Area Transit Needs

Mr. Means presented to the AC the identified transportation needs and service gaps from the previous Coordinated Plans for the Nashville Area and Clarksville Area. In discussing Nashville’s identified needs and gaps, service coordination and Information Transportation Systems, and how technology can play a role in improving transportation within the study area were discussed as additional needs and gaps. In discussing Clarksville’s identified gaps and needs, the AC discussed if a few items on the existing list of needs and gaps have been addressed since the last plan update. TDOT stated that park and ride lots should be added to the list for both the Nashville and Clarksville areas. Due to the level of discussion regarding the existing lists of needs and gaps, TranSystems offered to add more detail each item, and to continue the conversation via email.

Action Item: Send updated PowerPoint and list of area identified needs to the AC.

Next Steps

Ms. Frost discussed next steps with the AC. In the next month and a half, TranSystems will be working with TDOT and the AC to strengthen the list of stakeholders, review known and identify new transportation needs and service gaps, and identify strategies to meet those needs and gaps. Mrs. Frost reviewed the schedule with the AC and emphasized that the plan is to be completed before October 1, 2016. Below is an updated schedule.

Consultant Site Visit
Ms. Frost reviewed potential survey questions with the AC. The survey is meant to be sent out to stakeholders, transportation and human service providers, service users, elected officials, and advocates. Upon review of the survey questions, Clarksville and Nashville MTA discussed the recent survey efforts they have each undertaken. Both agencies agreed to share the surveys with TranSystems, and TranSystems will alter the survey as necessary and send the revised survey to the AC for approval. The AC expressed the importance of making printed surveys available to those stakeholders and meeting participants who are more comfortable with a print version.

Action Items: 1) Gather surveys from Clarksville and Nashville MTA. 2) Revise the existing survey and send the revised survey to the AC for approval.

Matthew Long, TDOT, stated that the best time for the next AC meeting and first public meeting would be early July after Independence Day. The AC requested that the next meeting be somewhere accessible to older adults and persons with disabilities that may utilize public transportation to attend the meeting. In addition to future meetings in Clarksville and Nashville, there was discussion about holding a future public meeting in Murfreesboro. TranSystems will work with TDOT and the respective MPOs to schedule upcoming meetings.

Ms. Frost and Mr. Means thanked everyone for attending the meeting, and encouraged the AC to contact them with any questions, comments or concerns.
Agenda

- Project Introduction
- Study Area
- Area Demographics
- Necessary Data
  - Build service inventory
  - Define service areas, service hours, and other characteristics
- Area Transit Needs
- Next Steps
  - Review survey questions
  - Prepare for stakeholder and public meetings
Project Introduction

At a minimum, the CPT-HSTP must include:

- Identification of current transportation providers and services, including public, private and non-profit providers;
- Assessment of the transportation needs of older adults, persons with disabilities, and individuals with low incomes, as appropriate;
- Identification of strategies, activities, and/or projects to address those needs and transportation service gaps and increase the efficiency of transportation services; and
- Implementation of priorities among strategies or activities, based on time, resources and feasibility
What types of services?
Study Area

The preliminary study area is comprised of 16 counties in Tennessee and 2 counties in Kentucky:

- Nashville MSA
- Clarksville MSA

Our team is open to discussion about refining the study area.
Area Demographics

- Demographic analysis focuses upon transportation disadvantaged populations
  - Older adults
  - Persons with disabilities
  - Persons with low income
- Population projections to 2025 help understand the need to accommodate future growth
Area Demographics

  - Older adults
  - Persons with disabilities
  - Persons with low income
- Population projections to 2025 help understand the need to accommodate future growth
Necessary Data

Service Inventory
- Human resource agencies, non-profit transportation providers, public transportation providers
- Non-emergency medical transportation (NEMT) providers
- Intercity and private transportation providers

Service Characteristics
- Service areas and service hours
- Fleet information (e.g. type and quantity of vehicles)
- Fare information

Other Data
- Park-and-ride facilities, MPO boundaries
Area Identified Needs

Coordinated Human Services Transportation and Program Management Plan (2007, revised 2013) - Nashville

- Enhanced Fixed Route Services
- Enhanced Paratransit Services
- Connectivity
- Transit Experience
- Transit Alternatives
- Information and Other Assistance
- Transportation for Youth and Children
- Affordability and Access to Autos
- Pedestrian Access and Land Use Coordination
- Bicycle and Pedestrian Issues
- Veterans’ Transportation Needs
Area Identified Needs

Coordinated Public Transit-Human Services Transportation Plan for the Clarksville Area (2011)

- Bus service on Sundays
- Night service
- Shorter headways for all routes
- Holiday service
- Service to rural areas
- Transportation of veterans locally
- Better service to Nashville and Murfreesboro
- Service to Industrial Park
- Service to Exit 1
- New vehicles
- More availability of day passes
- Educational programs
Next Steps

- Review survey questions (handout)
  - Upon approval, send out survey

- Stakeholder and public meeting
  - Identify list of stakeholders
  - Review known needs
  - Identify additional needs
  - Identify strategies
Thank you!

Re: Mid-Cumberland Area Coordinated Plan

The following are contained within this memo:

► A Summary of the Advisory Committee Meeting
► A summary of the General Public and Stakeholder Meetings
► A summary of the Public Survey
► A summary of the Needs and Gaps Identified and Strategies to Address the Needs and Gaps

Advisory Committee Meeting
The Advisory Committee met on the morning of July 13, 2016. The meeting began by providing an overview of the public involvement process, and a review of the study area and area demographics. The committee was provided a full inventory of known service providers. The committee identified two transportation providers that were not listed on the inventory: Angels Helping Hands in Clarksville and Classy Taxi in Murfreesboro. As an exercise, the TranSystems team and the Advisory Committee reviewed and prioritized the unmet transportation needs and service gaps. There were some recommendations offered by the Advisory Committee that are reflected in the Needs and Gaps section below.

General Public and Stakeholder Meetings
There were three general public and stakeholder meetings scheduled:
- 5:00-7:00pm on July 12, 2016 in Murfreesboro, TN
- 5:00-7:00pm on July 13, 2016 in Nashville, TN
- 5:00-7:00pm on July 13, 2016 in Clarksville, TN

The meetings were advertised in local newspapers, on Twitter, on Facebook, and/or dispersed via email to interested parties. The meetings were an opportunity for the general public and stakeholders to review and comment on the inventory of services, public survey, and unmet transportation needs and service gaps. Any and all materials gathered from the meetings and other public outreach efforts will be used to develop a local perspective on the unmet transportation needs and service gaps within the study area. Below are summaries of the public survey, unmet needs and gaps, and strategies to meet those needs and gaps.
Public Survey
Throughout June and July of 2016, a 14-question survey was developed and sent out to individuals, organizations and stakeholders to help identify transportation needs, gaps, and potential strategies. It was developed with input from TDOT, and the Advisory Committee. The survey was distributed digitally via email, Twitter and Facebook, as well as distributed as paper copies to customers and meeting participants. There were a total of 74 respondents.

The results of the survey have been summarized into a single document that has been distributed separately to the Advisory Committee and will be included in the final plan.

Service Gaps and Unmet Needs
A summary of the transportation needs of the target populations covered by the plan, which may include older adults, persons with disabilities, and individuals with low incomes is outlined below. These needs were identified throughout the public engagement process. The table also indicated whether the service gap or need applies to the provider, customer, or both. There is a summary of unmet needs and gaps for both the Clarksville Area and Nashville Area.

Following the charts that identify if the unmet need or gap applies to the transportation provider, customer or both, there are two charts (one for each area) that illustrate the prioritization of each unmet transportation need or service gap. This prioritization is based off information gathered from the unmet needs and gaps worksheets that were distributed at the Advisory Committee and general public/stakeholder meetings.

Unmet Needs and Gaps – Provider, Customer or Both

</tr>
</tbody>
</table>
To prioritize the list of unmet needs and service gaps each worksheet were scored using the following methodology:
- High ranking = 3 points
- Moderate ranking = 2 points
- Low ranking = 1 points

After scoring all the worksheets, a cumulative score was calculated. Each priority level was determined by dividing the total potential score (i.e. number of respondents multiplied by 3) and dividing that number by 3 (total number of priority levels). For example, seven respondents would have a total potential score of 21, and the high priority level would include any unmet need or gap that received between 15 and 21 points.

Strategies
As part of the exercise to prioritize the unmet needs and gaps, respondents were asked to identify preferred strategies for addressing known challenges. The following potential strategies are prioritized by how likely the Advisory Committee, general public and stakeholders think the strategies may be an effective means of addressing unmet transportation needs and service gaps.

Clarksville Area

Information and Awareness
► Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.
► Develop a local coordination policy body/council.

Geographical
► Review service routes and expand service to geographical areas not efficiently served by transit, paratransit or service agencies.
► Coordinate service delivery among lower density or difficult to access areas.
► Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed.

Time-Based
► Explore expanding hours to include weekend service.
► Explore expanding transit, paratransit, and service agency hours to include evening service.

Client-Based
► Evaluate existing services for Veterans and identify areas of expansion.

Service Quality
► Evaluate current service frequencies and identify ways to increase frequency of services.
► Identify funding to purchase transportation vehicles for increased service.

Nashville Area

Information and Awareness
► Develop a local coordination policy body/council
► Develop a one-stop transportation traveler call center to coordinate services
► Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.
► Host how-to-ride workshops.
► Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.

Geographical
► Evaluate current accessibility to transit stops and identify ways to improve first-/last-mile connections.
► Review service routes and expand service to key activity centers currently underserved or not
served by transit, paratransit or service agencies.

► Coordinate service delivery among lower density areas.
► Evaluate existing land uses near transit centers and identify ways to effectively coordinate land use with transit services, such as transit oriented development.

Time-Based
► Expand or shift hours to include weekend service.
► Expand transit, paratransit, and service agency hours to include evening service.

Client-Based
► Evaluate existing services for persons with disabilities and identify areas of expansion.
► Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops.
► Evaluate existing services for youth and children and identify areas of expansion.
► Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians.
► Evaluate existing services for Veterans and identify areas of expansion.
► Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnerships and payment adjustments.
► Evaluate current security on transit services and identify ways to increase security on vehicles.

Service Quality
► Evaluate current service frequencies and identify ways to increase frequency of services.
► Evaluate existing transportation alternatives and identify ways to expand transportation options.
► Evaluate existing paratransit and demand responsive transportation services and identify areas to expand services.
► Evaluate riders’ experiences and identify ways to better meet riders’ needs.
Mid-Cumberland Area Coordinated Public Transit and Human Services Transportation Plan

Stakeholder/General Public Meetings

July 12-13, 2016
Agenda

- Project Introduction
- Public Involvement
- Study Area
- Inventory of Services
- Area Demographics
- Area Transportation Needs and Service Gaps
  - Needs and Barriers
  - Potential Strategies to Address Needs and Gaps
- Prioritization Exercise and Survey
At a minimum, the CPT-HSTP must include:

- Identification of current transportation providers and services, including public, private and non-profit providers;
- Assessment of the transportation needs of older adults, persons with disabilities, and individuals with low incomes, as appropriate;
- Identification of strategies, activities, and/or projects to address those needs and transportation service gaps and increase the efficiency of transportation services; and
- Implementation of priorities among strategies or activities, based on time, resources and feasibility
Public Involvement

May: Advisory Committee Meeting

July: Advisory Committee Meeting and Public/Stakeholder Meetings
  - Inventory of services
  - Study area and area demographics
  - Unmet transportation needs and service gaps
  - Potential strategies to address identified needs and gaps

August and September: One Advisory Committee and One Public Meeting
The study area as defined by the Advisory Committee is comprised of 14 counties in Tennessee and 1 county in Kentucky:

- 12 counties in Nashville study area
- 3 counties in Clarksville study area

Nashville and Clarksville Area Coordinated Public Transit Human Services Transportation Plan
Area Demographics

- Demographic analysis focuses upon transportation disadvantaged populations
  - Older adults
  - Persons with disabilities
  - Persons with low income
- 216,926 older adults in the study area
  - Nashville area: 191,741
  - Clarksville area: 25,185
Area Demographics

Demographic analysis focuses upon transportation disadvantaged populations

- Older adults
- Persons with disabilities
- Persons with low income

220,869 persons with disabilities in the study area

- Nashville area: 187,838
- Clarksville area: 33,031
Area Demographics

- Demographic analysis focuses upon transportation disadvantaged populations
  - Older adults
  - Persons with disabilities
  - Persons with low income

- 279,117 persons with low income in the study area
  - Nashville area: 233,629
  - Clarksville area: 45,488
Area Demographics

Population projections from 2015 to 2025 understand the need to accommodate future growth.
Transportation Needs and Service Gaps

- Needs of older adults, persons with disabilities, and persons of low-income
  - Information and Awareness
  - Geographical
  - Time-based
  - Client-based
  - Service Quality
# Needs and Barriers

<table>
<thead>
<tr>
<th>Information and Awareness</th>
<th>Provider</th>
<th>User</th>

Overview of the Advisory Committee Meeting
The Advisory Committee met on the afternoon of August 18, 2016. The meeting began by providing an overview of the plan development process. The August meeting of the Advisory Committee is the last meeting of the committee. The next meeting is tentatively scheduled for 10:00am the morning of September 20th, and the focus of the meeting will be for members of the Advisory Committee, project stakeholders and members of the general public to review the draft plan. Comments received from this meeting will be used to develop the final draft of the plan.

During the meeting the Advisory Committee were asked to review and confirm the prioritized list of unmet needs and gaps and suggested strategies to address those needs and gaps. The committee provided valued input in finalizing the prioritization of unmet needs and gaps, and added substantive comments to help TranSystems further shape the recommended strategies.

The Advisory Committee had a few questions regarding ownership of the plan and the steps needed to be taken to make the plan official. TranSystems offered to set up a conversation between TDOT, Nashville MTA, Nashville Area MPO, Clarksville Transit and Clarksville MPO.
Summary of the Unmet Transportation Needs and Service Gaps

A summary of the transportation needs of the target populations covered by the plan, which may include older adults, persons with disabilities, and individuals with low incomes is outlined below. These needs and gaps were identified throughout the plan development process. The charts illustrate the prioritization of each unmet transportation need or service gap for both the Clarksville and Nashville areas. This prioritization is based off information gathered from the unmet needs and gaps worksheets that were distributed at the Advisory Committee and general public/stakeholder meetings. The Advisory Committee reviewed and confirmed the prioritized list of unmet transportation needs and service gaps shown below in Figures 1 and 2.

**Identified Strategies to Address the Needs and Gaps**

The Advisory Committee reviewed and confirmed the prioritized list of strategies for addressing known challenges. The discussion with the committee denoted the fact that these are potential strategies to address challenges and not promised to be pursued, as there are many limiting factors, such as funding. The following potential strategies are prioritized by how likely the strategy may be an effective means of addressing unmet transportation needs and service gaps.

**Clarksville Area**

**Information and Awareness**
- Consider enhancing planning activities and public education efforts to raise awareness of transit opportunities within the region.
- Consider the development of a local coordination policy body/council.

**Geographical**
- Review service routes and consider expanding service to geographical areas not efficiently served by transit, paratransit or service agencies.
- Consider the coordination of service delivery among lower density or difficult to access areas.
- Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed.

**Time-Based**
- Explore expanding hours to include weekend service.
- Explore expanding transit, paratransit, and service agency hours to include evening service.

**Client-Based**
- Evaluate existing services for Veterans and identify areas of expansion.

**Service Quality**
- Evaluate current service frequencies and consider ways to increase frequency of services.
- Identify funding to purchase transportation vehicles for increased service.

**Nashville Area**

**Information and Awareness**
- Consider the development of a local coordination policy body/council.
- Consider the development of a one-stop transportation traveler call center to coordinate services.
- Consider enhancing planning activities and public education efforts to raise awareness of transit opportunities within the region.
- Consider hosting how-to-ride workshops.
- Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.

**Geographical**
- Evaluate current accessibility to transit stops and consider ways to improve first-/last-mile
connections.
► Review service routes and consider expanding service to key activity centers currently underserved or not served by transit, paratransit or service agencies.
► Consider the coordination of service delivery among lower density areas.
► Evaluate existing land uses near transit centers and consider ways to effectively coordinate land use with transit services, such as transit oriented development.

Time-Based
► Explore expanding or shifting hours to include weekend service.
► Explore expanding transit, paratransit, and service agency hours to include evening service.

Client-Based
► Evaluate existing services for persons with disabilities and identify areas of expansion.
► Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops.
► Evaluate existing services for youth and children and identify areas of expansion.
► Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians.
► Evaluate existing services for Veterans and identify areas of expansion.
► Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnerships and payment adjustments.
► Evaluate current security to and from transit stops and on transit services and identify ways to increase security.

Service Quality
► Evaluate current service frequencies and identify ways to increase frequency of services.
► Evaluate existing transportation alternatives and identify ways to expand transportation options.
► Evaluate existing paratransit and demand responsive transportation services and identify areas to expand services.
► Evaluate riders’ experiences and identify ways to better meet riders’ needs.

Summary of Survey Results
There were a total of 74 survey responses. A majority of which identified themselves as individuals responding on his/her own behalf or as representatives from private, non-profit human service agencies. Below is a summary of the survey results.
- Top three types of services provided:
  - Social services.
  - Transportation for older adults and persons with disabilities.
  - Public transportation.
- Top three ways in which respondents describe themselves or their clients/constituents:
  - Persons with disabilities.
  - Older adults/seniors.
  - Persons with low income.
- Top three listed transportation needs:
  - Door-to-door transportation service.
• Weekday early morning transportation service.
  o Weekend service.
• A majority of respondents stated that lack of transportation is a frequent challenge.
• Top three activities respondents cannot do because of a lack of transportation:
  o Shopping or personal errands.
  o Medical trips.
  o Agency services.
• Top three reasons for not using public transportation:
  o Service does not operate at the times transit is needed.
  o Service does not go to desired destination.
  o It is difficult to access transit stops.
Agenda

- Current Status
- Prioritization of Needs and Gaps
- Potential Strategies to Address Needs and Gaps
- Survey Results
- Next Steps
Current Status

- May: Advisory Committee Meeting
- July: Advisory Committee Meeting and Public/Stakeholder Meetings
- **August: Advisory Committee Meeting**
  - Review prioritized list of needs and gaps
  - Review potential strategies
  - Review survey results
- September: Public/Stakeholder Meeting to Finalize Plan
Prioritization of Needs and Gaps

- Collect and score all of the Needs and Gaps Worksheets from the July Meeting
  - High = 3 points
  - Moderate = 2 points
  - Low = 1 point

- Calculate highest potential score and divide by 3
  - Top 1/3 = High priority
  - Middle 1/3 = Moderate priority
  - Bottom 1/3 = Low Priority

- Let’s take a moment to review the prioritized list of needs and gaps
Potential Strategies

Information and Awareness

- Explore the development of a local coordination policy body/council
- Explore the development of a one-stop transportation traveler call center to coordinate services
- Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.
- Host how-to-ride workshops.
- Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.
Potential Strategies

Geographical

- Evaluate current accessibility to transit stops and identify ways to improve first-/last-mile connections
- Review service routes and expand service to key activity centers currently underserved or not served by transit, paratransit or service agencies
- Coordinate service delivery among lower density areas
- Evaluate existing land uses near transit centers and identify ways to effectively coordinate land use with transit services, such as transit oriented development
- Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed
Potential Strategies

**Time-Based**
- Expand or shift hours to include weekend service.
- Expand transit, paratransit, and service agency hours to include evening service.

**Service Quality**
- Evaluate current service frequencies and identify ways to increase frequency of services.
- Evaluate existing transportation alternatives and identify ways to expand transportation options.
- Evaluate existing paratransit and demand responsive transportation services and identify areas to expand services.
- Evaluate riders’ experiences and identify ways to better meet riders’ needs.
- Identify funding to purchase transportation vehicles for increased service.
Potential Strategies

Client-Based

- Evaluate existing services for persons with disabilities and identify areas of expansion
- Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops
- Evaluate existing services for youth and children and identify areas of expansion
- Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians
- Evaluate existing services for Veterans and identify areas of expansion
- Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnerships and payment adjustments
- Evaluate current security on transit services and identify ways to increase security on vehicles
Survey Results

- Total of 74 respondents

- A vast majority or respondents were either:
  - Individuals responding on his/her own behalf
  - Representatives from private, non-profit human service agencies

- Top three types of services provided:
  - Social services
  - Transportation for older adults and persons with disabilities
  - Public transportation
Survey Results

- Top three ways in which respondents describe themselves or their clients/constituents:
  - Persons with disabilities
  - Older adults/seniors
  - Persons with low income

- Top three listed transportation needs:
  - Door-to-door transportation
  - Weekday early morning transportation service
  - Weekend service
Survey Results

- A majority of respondents stated that lack of transportation is a frequent challenge.

- Top three activities respondents cannot do because of lack of transportation:
  - Shopping or personal errands
  - Medical trips
  - Agency services

- Top three reasons for not using public transportation:
  - Service does not operate at the times transit is needed
  - Service does not go to desired destination
  - It is difficult to access transit stops
Next Steps

- TranSystems incorporates the feedback received today into the draft plan
- In September, TranSystems will be back for a general public and stakeholder meeting to review the draft plan
- By the end of September, TranSystems will deliver a final plan
Thank you!

Mid-Cumberland Area Coordinated Public Transit and Human Services Transportation Plan

Final Advisory Committee Meeting
September 20, 2016
We welcome your questions and comments about the draft Coordinated Public Transit - Human Services Transportation Plan:

- Introduction
- Inventory of Services
- Demographic Analysis
- Service Gaps and Needs
- Strategies
- Next Steps
Introduction

- Develop a coordinated public transit-human services transportation plan (CPT-HSTP) through the input of stakeholders and the public

Study area

- Nashville Area
  - 12 Counties in Tennessee
- Clarksville Area
  - 2 Counties in Tennessee
  - 1 County in Kentucky
Purpose of the Plan

The Mid-Cumberland Area CPT-HSTP:

- Identifies current transportation providers and services
- Assesses the transportation needs of older adults, persons with disabilities, and individuals with low incomes
- Provides strategies to address the identified needs
- Prioritizes transportation strategies and activities for funding and implementation priorities based on feasibility
# Planning Process

  - May 12, 2016 in Nashville, TN
  - August 18, 2016 in Nashville, TN
  - September 20, 2016 in Nashville, TN

- **Public Survey**
  - A 14-question survey was posted throughout the month of June 2016.
Public Outreach

An activity worksheet was handed out to attendants at the series of July meetings

- Prioritized service gaps/needs
- Identified potential strategies
- Allowed for additional comments
- Resulted in locally created:
  - Prioritized list of gaps/needs
  - Potential strategies
  - Qualitative data
Public Outreach

Survey Results

- Vast majority of respondents were either:
  - Individuals responding on his/her own behalf
  - Representatives of private, non-profit human service agencies

- Most common transportation needs identified included:
  - Door-to-door transportation
  - Weekday early morning & weekend transportation service

- A majority stated that lack of transportation frequently keeps people in their area from participating in the community

- Top three activities that cannot be done because of a lack of transportation: shopping/personal errands, medical trips and agency services
Inventory of Services

- Fixed-Route: 4 (Nashville), 2 (Clarksville)
- Demand Response: 4 (Nashville), 3 (Clarksville)
- NEMT: 6 (Nashville), 88 (Clarksville)
- Agencies: 11 (Nashville), 4 (Clarksville)
- Inter-city Bus: 2 (Nashville), 1 (Clarksville)
- Private Demand: 18 (Nashville), 11 (Clarksville)

Legend:
- Blue: Nashville Area
- Orange: Clarksville Area
**Demographic Analysis**

A majority of the transportation disadvantaged populations are located in and around municipalities:

- Nashville area: Nashville, Murfreesboro, Franklin, Columbia and Lebanon
- Clarksville area: Clarksville and Hopkinsville

<table>

Priority Level: 4 High 2 Moderate 0 Low

Barriers to Implementation

- Lack of funding
- Lack of coordination and the utilization of vehicles
- Lack of diverse types of service
- Lack of communication with customers
Strategies for Meeting Needs

A broad set of strategies and activities were identified.

Many strategies may address more than one need or gap.

Strategies are divided into short-term and long-term:

- Short-term can be accomplished more quickly and with less effort.
- Long-term may take more time, and sometimes, depend upon the completion of a short-term strategy.
Short-Term Strategies

- Explore the development of a local coordination policy body/council.
- Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.
- Host how-to-ride workshops.
- Evaluate current accessibility to transit stops and identify ways to improve first/last-mile connections.
Short-Term Strategies

- Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed.
- Expand or shift hours to include weekend service.
- Expand transit, paratransit and service agency hours to include evening service.
Short-Term Strategies

- Evaluate existing services for persons with disabilities and identify areas of expansion.
- Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops.
- Evaluate existing services for youth and children and identify areas of expansion.
- Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians.
Short-Term Strategies

- Evaluate existing services for veterans and identify areas of expansion.
- Evaluate current security on transit services and at/near transit stops, and identify ways to increase the security on vehicles.
- Evaluate current service frequencies and identify ways to increase frequency of services.
Short-Term Strategies

- Evaluate riders’ experiences and identify ways to better meet riders’ needs.
- Identify funding to purchase transportation vehicles for increased service.
Long-Term Strategies

- Explore the development of a one-stop transportation call center to coordinate services.
- Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.
Long-Term Strategies

- Review service routes and explore expanding service to key activity centers currently underserved or not served by transit, paratransit or service agencies.
- Consider coordinating service delivery among lower density areas.
- Evaluate existing land uses near transit centers and identify ways to effectively coordinate land use with transit services, such as transit oriented development.
Long-Term Strategies

- Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnership and payment adjustments.
- Evaluate existing transportation alternatives and identify ways to expand transportation options.
- Evaluate existing paratransit and demand responsive transportation service and identify areas to expand services.
Next Steps

- Extensive appendix of federal programs, eligible applicants, and typical use of funds
  - Federal Programs and Tax Incentives
  - State and Local Funding
  - Public-Private Partnerships

- There exists a need to monitor transportation issues and determine how the strategies may apply to ongoing planning efforts
Thank you!

The following are contained within this memo:

- Attendance at the September 20, 2016 Meeting
- Overview of the Advisory Committee Meeting

### Attendance

- Matthew Long, TDOT
- Nellie Patton, City of Murfreesboro
- Billy Higgins, Nashville MTA
- Shontrill Lowe, Nashville MTA
- Mary Connelly, Nashville Area MPO
- Norma Powell, GNRC
- Michelle Lacewell, Nashville Area MPO
- Laura Dieckhaus, MCHRA
- Jill Hall, Clarksville Urbanized Area MPO
- Kwabene Aboagye, TDOT
- Matthew Long, TDOT
- Sarah Frost, TranSystems
- Tyler Means, TranSystems

### Overview of the Advisory Committee Meeting

Sarah Frost and Tyler Means of TranSystems provided a presentation overviewing the various components of the draft Coordinated Public Transit – Human Services Transportation Plan (CPT-HSTP), as well as delineating how the draft CPT-HSTP meets all federal requirements. The presentation reviewed the inventory of services, demographic analysis conducted on the Nashville and Clarksville areas, identified transportation needs and service gaps, and prioritized list of recommended strategies and activities to address the identified needs and gaps. As part of the review of the inventory of services, there was a discussion that led Mr. Means to delineating that non-emergency medical transportation includes any individual or organization that is licensed by the state to provide such services. The overview of transportation needs and service gaps led to multiple discussions that elaborated on the relationships Nashville MTA and TDOT have with their respective 5310 subrecipients, and how the two entities could work more effectively together in the future to address emerging transportation challenges, such as ensuring funding is available for transportation providers servicing residents of suburban and exurban communities. Additionally, there was a conversation regarding how non-profit agencies may prove to be the key in expanding service areas that cover not only urban communities, but also surrounding suburban, exurban and rural communities. This in turn would allow one provider the ability to help hard-to-reach customers access resources outside their communities. The review of needs and gaps also illustrated the need for TranSystems to clarify a few of the needs and gaps to more
specifically address challenges, such as ensuring that “above and beyond” ADA services was referring to the need for more door-to-door and door-through-door services. It was also mentioned that more clarity be added to defining affordable transportation, so that the affordability question was not about further subsidizing transportation services, but about ensuring that low income customers are able to cover their cost of utilizing transportation services.

There was a discussion regarding the ownership of the CPT-HSTP. Tennessee DOT will maintain ownership of this plan. Nashville MTA and Clarksville MPO will post the plan to their website and consider this the updated CPT-HSTP, from which Section 5310 funding applicants will have to reference. The Section 5310 funding recipients do not need to be listed in the plan, but should be listed in the respective area’s Transportation Improvement Program. In three years the plan will need to be updated for each area. The update can be as simple as reviewing the current status of the study area and updating the plan to consider contemporary challenges, or the update can be more detailed and consider a full update.

Next steps include TranSystems incorporating the recommendations received from the Advisory Committee into the document, adding language referencing the Nashville MTA and Clarksville Urbanized Area MPO’s Title VI plan. The final plan should be delivered to the Advisory Committee in early October, after final comments are received and incorporated into the document on September 30, 2016.

As a final action, the Advisory Committee motioned to approve the plan, with incorporation of all comments, as the updated CPT-HSTP for both the Nashville and Clarksville areas.
Public meetings will be held next week to help us better understand the needs and gaps in transit service across the region, specifically with an emphasis on services for the elderly, persons with disabilities, and low-income individuals.

Join us on Tuesday, July 12 from 5-7pm in Murfreesboro (4765 Florence Road) or on Wednesday, July 12 from 5-7pm in Nashville at the Music City Central Conference Room (460 Charlotte Ave) [http://ow.ly/oR5D3023CD9](http://ow.ly/oR5D3023CD9).

Nashville Area MPO: Public Notices

NASHVILLEMPO.ORG

---

Join us today in Murfreesboro from 5-7pm for a public meeting to learn more about the needs and gaps in transit service across the region, specifically with an emphasis on services for the elderly, persons with disabilities, and low-income individuals. [http://ow.ly/ZNve3029VCv](http://ow.ly/ZNve3029VCv).

Nashville Area MPO: Public Notices

All Technical Coordinating Committee meetings begin at 10:30 AM at the Bridge Building, 2 Victory Avenue, Suite 300 Nashville. Directions to the...
The Clarksville Urbanized Area Metropolitan Planning Organization (MPO) is updating its Coordinated Human Services Transportation Plan. This plan will contain policies, goals, and objectives for the coordinated development of public transportation services in the Clarksville MPO Study Area, with an emphasis on services for the elderly, persons with disabilities, and low-income individuals. The plan will identify strategies, activities, and/or projects to address those needs and service gaps, and increase the efficiency of those transportation services.

The public is hereby given notice that the Clarksville MPO will hold a public meeting to provide information on the plan update and regional public survey, as well as to solicit input from the public on goals, objectives, and expected outcomes for the updated Coordinated Human Services Transportation Plan. The meeting will be held as follows:

July 13, 2016 – 5:00 PM to 7:00 PM – Clarksville – Montgomery County Public Library Small Meeting Room, 350 Pageant Lane, Suite 501, Clarksville, TN 37040

It is the policy of the MPO to ensure compliance with Title VI of the Civil Rights Act of 1964; 49 CFP part 26; No person shall be excluded from participation in or be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal funds on the grounds of Race, Color, Sex, National Origin or Disabilities. In accordance with the “Americans with Disabilities Act”, if you have a disability that require aids or services to participate either in the review of these documents or at the hearing, for which the MPO needs to provide accommodations, please notify us of your requirements by July 8, 2016. This request does not have to be in writing. Anyone having questions or comments may contact Stan Williams or Jill Hall at 931-645-7448 or email stan.williams@cityofclarksville.com or jill.hall@cityofclarksville.com and/or attend the meeting.

This notice is funded (in part) under an agreement with the State of Tennessee Departments of Transportation.
The Nashville Area Metropolitan Planning Organization (MPO) is updating its Coordinated Human Services Transportation Plan. This plan will contain policies, goals, and objectives for the coordinated development of public transportation services in the Nashville MPO Study Area, with an emphasis on services for the elderly, persons with disabilities, and low-income individuals. The plan will identify strategies, activities, and/or projects to address those needs and service gaps, and increase the efficiency of those transportation services.

The public is hereby given notice that the Nashville MPO will hold a public meeting to provide information on the plan update and regional public survey, as well as to solicit input from the public on goals, objectives, and expected outcomes for the updated Coordinated Human Services Transportation Plan. The meeting will be held as follows:

July 12, 2016 – 5:00 PM to 7:00 PM – 4765 Florence Road, Murfreesboro, TN 37129

It is the policy of the Nashville Area MPO not to discriminate on the basis of age, race, color, national origin or disability in its hiring or employment practices, or in its admissions to or operations of its program, services, or activities. All inquiries for Title VI and/or the Americans with Disabilities Act (ADA), or for persons with disabilities that require aids or services to participate either in the review of these documents or at the hearing may contact:

Nellie B. Patton, Assistant Transportation Director
City of Murfreesboro
615-893-6441

This notice is funded (in part) under an agreement with the Federal Transit Administration and the State of Tennessee Department of Transportation.
**Mid-Cumberland Area Coordinated Plan – Nashville Area**

In your opinion, please indicate if addressing each service gap or need should be a high, moderate, or low priority for the Mid-Cumberland Area Coordinated Plan.

**Potential Strategies**
The following are potential strategies to address the service gaps and unmet needs.

**Information and Awareness**
- Develop a local coordination policy body/council
- Develop a one-stop transportation traveler call center to coordinate services
- Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.
- Host how-to-ride workshops.
- Evaluate existing transportation-related technologies and identify new technologies to implement in the region that may increase operator and customer interaction.

**Geographical**
- Review service routes and expand service to key activity centers currently underserved or not served by transit, paratransit or service agencies.
- Coordinate service delivery among lower density areas.
- Evaluate existing land uses near transit centers and identify ways to effectively coordinate land use with transit services, such as transit oriented development.
- Evaluate current accessibility to transit stops and identify ways to improve first-/last-mile connections.

**Time-Based**
- Expand transit, paratransit, and service agency hours to include evening service.
- Expand or shift hours to include weekend service.
Client-Based
► Evaluate existing services for persons with disabilities and identify areas of expansion.
► Evaluate existing customer amenities at transit stops and identify cost-effective amenity improvements at transit stops.
► Evaluate existing services for youth and children and identify areas of expansion.
► Evaluate existing bicycle and pedestrian pathways and identify ways to improve accessibility for cyclists and pedestrians.
► Evaluate existing services for Veterans and identify areas of expansion.
► Evaluate the costs of various modes of transportation and identify ways to make transportation more affordable, this includes but is not limited to policies, subsidies, partnerships and payment adjustments.
► Evaluate current security on transit services and identify ways to increase security on vehicles.

Service Quality
► Evaluate existing paratransit and demand responsive transportation services and identify areas to expand services.
► Evaluate current service frequencies and identify ways to increase frequency of services.
► Evaluate riders’ experiences and identify ways to better meet riders’ needs.
► Evaluate existing transportation alternatives and identify ways to expand transportation options.

**Potential Strategies**

The following are potential strategies to address the service gaps and unmet needs.

**Information and Awareness**

- Develop a local coordination policy body/council.
- Enhance planning activities and public education efforts to raise awareness of transit opportunities within the region.

**Geographical**

- Review service routes and expand service to geographical areas not efficiently served by transit, paratransit or service agencies.
► Coordinate service delivery among lower density or difficult to access areas.
► Review service options to and from Nashville and Murfreesboro, and assess the possibility of additional services as needed.

**Time-Based**
► Explore expanding transit, paratransit, and service agency hours to include evening service.
► Explore expanding hours to include weekend service.

**Client-Based**
► Evaluate existing services for Veterans and identify areas of expansion.
► Evaluate existing day pass programs and dispersion methodology, and identify ways to expand the availability of day passes.

**Service Quality**
► Identify funding to purchase transportation vehicles for increased service.
► Evaluate current service frequencies and identify ways to increase frequency of services.

Public Input Survey

Mid-Cumberland Area Coordinated Transportation Plan

An assessment of our community’s transit needs

Throughout June and July of 2016, a 14-question survey was developed and sent out to individuals, organizations and stakeholders to help identify transportation needs, gaps, and potential strategies. It was developed with input from TDOT, and the Advisory Committee. The survey was distributed digitally via email, Twitter and Facebook, as well as distributed as paper copies to customers and meeting participants. There were a total of 74 respondents.

Survey Questions and Summary of Results

The survey consisted of the following questions, prompts and answers. A summary of the survey is provided below. The numbers following the description denote the total number of respondents for that particular answer.

Section 1. Agency Type.

(Q1) Which of the following best describes your organization?

I am an individual responding to the survey on my own behalf 28
County Government 3
Municipal Government 2
Regional or State Government 7
Federal or State Human Service Agency 1
Private, Non-Profit Human Service Agency 22
Private, For-Profit Transportation Company 1
Private, Non-Profit Transportation Company 1
Other (please specify) 4

Other organizations specified: Non-profit Management Company, Volunteer Organization, Hospital, and Public Housing Authority

(Q2) What types of services does your agency provide?

Health Care 10
Social Services 34
Public Transportation 13
Transportation for Older Adults and Persons with Disabilities 16
Bicycle/Pedestrian Transportation 0
Grant Funding 5
Economic Development 5
Other (please specify) 8

Other services specified: Food services, Housing (3), Beneficial society for deaf/blind consumers, PR/Marketing firm, Planning, General Sessions recovery court

Section 2. Service Details

(Q3) How would you describe yourself or your clientele/constituents?

General Public 17
Older Adult/Senior 34
Person with Disabilities 41
Person with Low Income 33
Veteran 11
Other (please specify) 5

Other descriptions specified: Refugees, Formerly incarcerated (2), Women, Women and children

(Q4) What are your specific transportation needs or the transportation needs of your clientele/constituents?

Travel Assistance 19
Wheelchair Accessibility 22
Door-to-Door Transportation 32
Weekday Early Morning Service 26
Weekday Late Night Service 20
Weekend Service 24
Accessibility to Existing Services/Last Mile Connections (e.g. Sidewalks, Bike Lanes) 18
Other (please specify) 5
Other transportation needs specified: Medical, Own vehicle, Door-through-door service, Financial assistance for gas, Monthly bus passes

(Q5) Please note the top three trip origins (where trips begin) and top three trip destinations (where trips end) for you or your clients/constituents. Please include the facility or site name, if known, and/or address of each origin and destination.

Below are the trip origins and destinations in order of frequency (most to least).

**Origin:**
1. Nashville Metropolitan Area
2. Trevecca
3. Franklin, TN
4. Welcome Home Ministries
5. Downtown Nashville
6. Clarksville, TN
7. Murfreesboro
8. Farmer’s Market
9. St. Thomas West
10. Mending Hearts
11. Lebanon Rd
12. Madison, TN
13. Progress
14. Music City Central
15. Williamson Medical Center
16. Woburn Way
17. Jewish Community Center
18. Old Firehouse Day Shelter
19. Madison Station
20. Anderson Rd
21. Senior Highrise
22. Medical Office
23. Southern Kentucky
24. Riverfront Station
25. Homeless Shleter
26. Retirement Community
27. Social Service Program Office
28. Nolensville, TN (Wal-Mart)
29. Outside Middle Tennessee
30. Donelson Pike
31. Fort Campbell, KY

**Destination:**
1. Nashville Metropolitan Area
2. Work/Medical Locations
3. Vanderbilt Medical Center
4. Shopping/Grocery
5. Franklin, TN
6. Downtown Nashville
7. Kroger
8. Brighton Valley Apartments
9. Music City Central
10. Jewish Community Center
11. Centennial Park
12. Clarksville, TN
13. Adult Day Care
14. DHS Office
15. Deconstruction, Inc.
16. Williamson Medical Center
17. Home
18. Movie Theater
19. Madison Station
20. Murfreesboro, TN
21. Fort Campbell, KY
22. Nashville Public Library
23. Child Care
24. Congregate Meal Sites
25. Rivergate Mall
27. Pharmacy
28. Human Service Agencies
29. Parole Office
30. Goodwill Industries

**Section 3. Unmet Transportation Needs.**

(Q6) Does lack of transportation keep you or individuals in your area from participating in programs, activities, or services?

Yes, frequently 31
Sometimes 18
Never 8
Don’t know 4

(Q7) What are your unmet transportation demands or the unmet transportation demands of your clientele/constituents?
Weekday Early Morning Service 16
Weekday Late Night Service 17
Weekend Service 25
More Frequent Services 27
More Services for Older Adults and Persons with Disabilities 26
More Sufficient Service at the Location of Trip Origin or Trip Destination 17
Access to Jobs 20
Access to Medical-related Locations 22
Accessibility to Existing Services/Last Mile Connections (e.g. Sidewalks, Bike Lanes) 12
Other (please specify) 7

Other unmet demands specified: More connection to Franklin, More door-to/through-door services, Less required time between scheduling and actual trip, More direct services, Pre-purchase passes for transportation between Clarksville and Nashville, Lower cost transportation services, Long wait for return trips

(Q8) Has lack of transportation options prevented you or your clientele/constituents from doing any of the following?

Lack of transportation is not a problem for me 7
Shopping or personal errands 33
Medical trips 32
Education 14
Seeking employment 19
Getting to work reliably 21
Taking kids to daycare/school and then continuing to my workplace 5
Agency services 23
Recreation 20
Other (please specify) 3

Other activities specified: Cannot provide service for all trip requests, Lack of transit connectivity, No transportation on a regular basis

(Q9) Are there any days or hours that you or your clientele/constituents would like to travel VIA PUBLIC TRANSPORTATION when service is currently unavailable?

Weekday early morning 23
Weekday late nights 21
Weekend late nights (Friday and Saturday nights) 23
Saturday days 22
Sunday days 25
Other (please specify) 6

Other comments specified: Special events, Reliability to get to and from work, Holidays, Utilizing AccessRide, Having to depend on friends and family for transportation

(Q10) Are there any specific places that you or your clientele/constituents would to travel to VIA PUBLIC TRANSPORTATION that are currently unavailable? Please include the facility or site name, if known, and/or address.

This was an open-ended question. Therefore, the responses are listed below.

1. Nashville Airport (2 responses)
2. Wal-Mart
3. Trevecca
4. Chattanooga Aquarium
5. Providence Mall
6. Loveless Café
7. Across County Lines
8. Bellevue Family YMCA
9. J.L. Turner Center
10. Needless Nashville
12. Frist Center
13. Schmerhorn Symphony Center
14. smART (4 Bucci Ct.)
15. Clarksville, TN (Trough Spring Rd)
16. Goodlettsville, TN (School past Hunter's Ln)
17. Easier Access to Job Locations
18. Cross Town Routes
Section 4. Individual Choices

(Q11) Which of these services do you or your clientele/constituents currently use for transportation?

- Personal motor vehicle 32
- Fixed-route bus or train 32
- Paratransit 14
- Human resource agency (HRA) 11
- Other agency transportation provider 15
- Public transportation provider 27
- Transportation provided by a program (e.g. subscription service) 12
- Greyhound/Other private carrier 4
- Private demand service (e.g. taxi, Uber) 15
- Non-emergency medical transportation 9
- Carpool 5
- Ride with friends/relatives 34
- Walk/Bike 12
- Currently, there is no reliable method of transportation 1
- Other (please specify) 2
- Other responses specified: Vanpool, Individual can’t afford extra trips for grocery and entertainment.

(Q12) If you or your clientele/constituents do not use public transportation, please select the reason(s) why public transportation is not utilized.

- It's too expensive 9
- It takes a long time to reach my final destination 19
- Service does not go to desired destination 26
- Service does not operate at the times when transit is needed 27
- There is limited accessibility (e.g. it is difficult to access the transit stops) 21
- Lack of transit amenities at transit stops (e.g. shelters, benches) 12
- Service schedule is difficult to understand 13
- Negative perception of service (e.g. I don’t want people to know I use public transportation) 1
- Travel assistance is needed 13
- The service is unreliable 10
- Other (please specify) 6

Other reasons specified: Time of availability and duration of wait once destination is reached, Need assistance for deaf/blind individuals, Cannot transport after surgery, has a car, I use the transportation I use because of my condition, It's very inconvenient

(Q13) Do you have any other comments or suggestions you would like to share today?

This was an open-ended question. Therefore, the answers have been provided below.

1. Develop rail transit to Franklin, Clarksville, Murfreesboro, Dickson, like it is to Lebanon, TN. Provide bus service from station stops to other bus routes.
2. We are grateful for the access to transportation provided by RTA and the MTA transportation grants.
3. The Chronic Kidney patients we serve often have a difficult time getting to and from the bus. Some are disabled and struggle to reach bus stops. Many are low income and cannot afford to ride the bus several times a week to and from the dialysis clinic or doctor’s office.
4. The Council on Aging and Senior Transportation Leadership Coalition are creating a new volunteer ride service for older adults in Nashville, modeled after Austin’s Drive a Senior and Blount County’s Smiles. Volunteer drivers (screened & trained) will use their own cars to provide door-to-door and door-through-door assisted transportation.
5. Since this includes Clarksville, no real options if you do not have car/gas $$ for appointments in Nashville.
6. Reliable and affordable transportation is a big need for our seniors in the Bellevue community who are unable to
drive anymore. Seniors need socialization and exercise to help extend and enrich their lives. I truly hope Nashville can find a reliable and safe means for home bound seniors to get to their desired locations.

7. Many individuals we support use Access Ride (AR), but are often frustrated with the wait. For example, if an individual uses AR to come pick up a benefit package, they’re left sitting in the lobby for up to 2 or more hours until AR comes back. It would be nice if there were some sort of short term trip option - like, if you’re only dropping off a payment or signing a release, etc. - why could the driver not wait a few minutes? I realize it’s not that simple - but something to consider in organization of schedules and routes for special transportation needs.

8. We have been working with Council on Aging Middle TN (COA Mid TN) to develop a Volunteer Transportation Program for older adults. We have held focus groups and am happy to share those results as well. Please feel free to contact me if you would like more information.

annalea.cothron@tn.gov

9. Thank you for considering how Nashvillians can better access social services as part of the city’s transit planning. This is a critical issue for our clients.

10. Our service is ceasing operation on September 30, 2016 due to lack of funding and expense in operating this service.

11. I would love to see a discount for non-profits such as Centerstone. We need Sunday routes and a larger cover area. Also, we need an appeal process for clients that are banned due to mental symptom, life time ban is not fair.

12. The committee should work on developing a plan of transportation (build over Ellington Parkway) to assist with traffic congestion coming out of Hendersonville to down town during the rush hours. Address traffic issues in Antioch areas. Build street cars (where appropriate). Etc. Use of a Mono Rail (Sky Rail) for traveling.

13. Wheelchair ramps everywhere please!!!

14. My cousin takes me anywhere I need to go.

Section 5. Conclusion

(Q14) Please provide the following information: Name, organization, title, street address, city/town/village, state, ZIP, email address, and where you would like to be added to the MPO’s mailing list.
